**Silence: A User's Guide, Volume One** Feb 20 2024 Silence is essential for the health and well-being of humans and the environment in which they live. Yet silence has almost vanished from our lives and our world. Of all the books that claim to be about silence, this is the only one that addresses silence directly. Silence: A User's Guide is just what the title says: it is a guide to silence, which is both a vast interior spaciousness, and the condition of our being in the natural world. This book exposes the processes by which silence can transfigure our lives--what Maggie Ross calls "the work of silence"; it describes how lives steeped in silence can transfigure other lives unawares. It shows how the work of silence was once understood to be the foundation of the teaching of Jesus, and how this teaching was once an intrinsic part of Western Christianity; it describes some of the methods by which the institution suppressed the work of silence, and why religious institutions are afraid of silence. Above all, this book shows that the work of silence gives us a way of being in the world that is more than we can ask for or imagine.

**Registries for Evaluating Patient Outcomes** Sep 03 2022 This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
