

# The Lesson of the Kaibab

Name: \_\_\_\_\_

Period: \_\_\_\_\_

**Introduction:** The environment may be altered by forces within the biotic community, as well as by relationships between organisms and the physical environment. The **carrying capacity** of an ecosystem is the maximum number of organisms that an area can support on a sustained basis. The density of a population may produce such profound changes in the environment that the environment becomes unsuitable for the survival of that species. For instance, overgrazing of land may make the land unable to support the grazing of animals that lived there.

## Objectives:

- Graph data on the Kaibab deer population of Arizona from 1905 to 1939
- Determine factors responsible for the changing populations
- Determine the carrying capacity of the Kaibab Plateau

## Background

Before 1905, the deer on the Kaibab Plateau were estimated to number about 4000. The average carrying capacity of the range was then estimated to be about 30,000 deer. On November 28th, 1906, President Theodore Roosevelt created the Grand Canyon National Game Preserve to protect the "finest deer herd in America."

Unfortunately, by this time the Kaibab forest area had already been overgrazed by sheep, cattle, and horses. Most of the tall grasses had been eliminated. The first step to protect the deer was to ban all hunting. In addition, in 1907, The Forest Service tried to exterminate the predators of the deer. Between 1907 and 1939, 816 mountain lions, 20 wolves, 7388 coyotes and more than 500 bobcats were killed.

Signs that the deer population was out of control began to appear as early as 1920 - the range was beginning to deteriorate rapidly. The Forest Service reduced the number of livestock grazing permits. By 1923, the deer were reported to be on the verge of starvation and the range conditions were described as "deplorable."

The Kaibab Deer Investigating Committee recommended that all livestock not owned by local residents be removed immediately from the range and that the number of deer be cut in half as quickly as possible. Hunting was reopened, and during the fall of 1924, 675 deer were killed by hunters. However, these deer represented only one-tenth the number of deer that had been born that spring. Over the next two winters, it is estimated that 60,000 deer starved to death.

Today, the Arizona Game Commission carefully manages the Kaibab area with regulations geared to specific local needs. Hunting permits are issued to keep the deer in balance with their range. Predators are protected to help keep herds in balance with food supplies. Tragic winter losses can be checked by keeping the number of deer near the carrying capacity of the range.

## Lesson Of The Kaibab Lab Answer Key

**Heart of a Lion** William Stolzenburg,2016-04-12 Late one June night in 2011 a large animal collided with an SUV cruising down a Connecticut parkway The creature appeared as something out of New England s forgotten past Beside the road lay a 140 pound mountain lion Speculations ran wild the wildest of which figured him a ghostly survivor from a bygone century when lions last roamed the eastern United States But a more fantastic scenario of facts soon unfolded The lion was three years old with a DNA trail embarking from the Black Hills of South Dakota on a cross country odyssey eventually passing within thirty miles of New York City It was the farthest landbound trek ever recorded for a wild animal in America by a barely weaned teenager venturing solo through hostile terrain William Stolzenburg retraces his two year journey from his embattled birthplace in the Black Hills across the Great Plains and the Mississippi River through Midwest metropolises and remote northern forests to his tragic finale upon Connecticut s Gold Coast Along the way the lion traverses lands with people gunning for his kind as well as those championing his cause Heart of a Lion is a story of one heroic creature pitting instinct against towering odds coming home to a society deeply divided over his return It is a testament to the resilience of nature and a test of humanity s willingness to live again beside the ultimate symbol of wildness

**Resource Selection by Animals** B.F. Manly,L. McDonald,D.L. Thomas,Trent L. McDonald,Wallace P. Erickson,2007-05-08 We have written this book as a guide to the

design and analysis of field studies of resource selection concentrating primarily on statistical aspects of the comparison of the use and availability of resources of different types Our intended audience is field ecologists in general and in particular wildlife and fisheries biologists who are attempting to measure the extent to which real animal populations are selective in their choice of food and habitat As such we have made no attempt to address those aspects of theoretical ecology that are concerned with how animals might choose their resources if they acted in an optimal manner The book is based on the concept of a resource selection function RSF where this is a function of characteristics measured on resource units such that its value for a unit is proportional to the probability of that unit being used We argue that this concept leads to a unified theory for the analysis and interpretation of data on resource selection and can replace many ad hoc statistical methods that have been used in the past

**From Kostenki to Clovis** Olga Soffer, N.D. Praslov, 2013-06-29 From the American Side I went to the USSR for the first time in 1982 to attend the 11th meeting of the International Union for Quaternary research INQUA held at the Moscow State University At that time relations between our two countries were anything but congenial and many restrictions were placed on our viewing the archaeological and paleontological collections and laboratory facilities This was not the ideal climate for the free exchange of ideas needed for meaningful research However it was obvious to us that the strained relations did not extend to scientific discussions between scholars We left that meeting well aware that if the problems of prehistoric Old World New World relationships were to be resolved it would eventually require cooperative research efforts within the world community of archaeologists At that time the pre Clovis problem in New World archaeology was foremost in the minds of many North American researchers tool technology and assemblages were being studied as a possible means of establishing cultural relationships across the Bering Strait Clovis sites and mammoth kills were being looked at with new ideas for interpretation and New World researchers realized that to resolve these questions they had to become familiar with the archaeological record of northeast Asia A chance meeting of the writer with Olga Soffer in 1983 led to serious discussions of the sites on the Russian or East European Plain

**Physiological Ecology of North American Plant Communities** Brain F. Chabot, 2012-12-06 Although as W D Billings notes in his chapter in this book the development of physiological ecology can be traced back to the very beginnings of the study of ecology it is clear that the modern development of this field in North America is due in the large part to the efforts of Billings alone The foundation that Billings

laid in the late 1950s came from his own studies on deserts and subsequently arctic and alpine plants and also from his enormous success in instilling enthusiasm for the field in the numerous students attracted to the plant ecology program at Duke University Billings own studies provided the model for subsequent work in this field Physiological techniques normally confined to the laboratory were brought into the field to examine processes under natural environmental conditions These field studies were accompanied by experiments under controlled conditions where the relative impact of various factors could be assessed and further where genetic as opposed to environmental influences could be separated This blending of field and laboratory approaches promoted the design of experiments which were of direct relevance to understanding the distribution and abundance of plants in nature Physiological mechanisms were studied and assessed in the context of the functioning of plants under natural conditions rather than as an end in itself

Darwin-Inspired Learning Carolyn J. Boulter, Michael J. Reiss, Dawn L. Sanders, 2015-01-19 Charles Darwin has been extensively analysed and written about as a scientist Victorian father and husband However this is the first book to present a carefully thought out pedagogical approach to learning that is centered on Darwin s life and scientific practice The ways in which Darwin developed his scientific ideas and their far reaching effects continue to challenge and provoke contemporary teachers and learners inspiring them to consider both how scientists work and how individual humans read nature Darwin inspired learning as proposed in this international collection of essays is an enquiry based pedagogy that takes the professional practice of Charles Darwin as its source Without seeking to idealise the man Darwin inspired learning places importance on active learning hands on enquiry critical thinking creativity argumentation interdisciplinarity In an increasingly urbanised world first hand observations of living plants and animals are becoming rarer Indeed some commentators suggest that such encounters are under threat and children are living in a time of nature deficit Darwin inspired learning with its focus on close observation and hands on enquiry seeks to re engage children and young people with the living world through critical and creative thinking modeled on Darwin s life and science

*The Las Vegas Formation* Kathleen B. Springer, 2018 The Las Vegas Formation was established in 1965 to designate the distinctive light colored fine grained fossil bearing sedimentary deposits exposed in and around the Las Vegas Valley Nevada In a coeval designation the sediments were subdivided into informal units with stratigraphic and chronologic

frameworks that have persisted in the literature Use of the Las Vegas Formation name over the past half century has been hampered because of the lack of a robust definition and characterization of the entire lithostratigraphic sequence and its geographic distribution and chronology This study evaluates and describes deposits attributed to the Las Vegas Formation with detailed stratigraphy sedimentology and field relations Provided by publisher
