This text explores the power of mathematics and shows how mathematics has revolutionized the world. The main theme throughout this book is problem solving. In the first part of the book, The Power of Mathematics, Smith begins by discussing math anxiety and how to formulate the problem. Students develop confidence and then learn problem solving techniques from arithmetic, algebra, and geometry. In the second part of the book, The Utility of Mathematics, students apply these techniques to topics that were selected because of their usefulness to students. The topics include managing money using the ideas of interest, installment buying, credit card buying, inflation, buying a car or home, sets, probability, contests, statistics, surveys, and the influence of these topics on students' lives. While building critical-thinking and communication skills, students develop an appreciation of mathematics as they each learn something that will make life easier, less costly, or more efficient. Vol. 6 includes index-digest, v. 1-6. Develops learning from component skills to applications and problem solving, not from applications to skills. Myanmar's Constitution of 2008 was the 'road map' for the reform process that began in 2011. Despite extensive criticism of this Constitution for its emphasis on the role of the military, much progress has been made towards constitutional government and law reform. With the election of the opposition NLD to government in the general election of November 2015 and the presidential electoral college election of March 2016, now is the time to consider the Constitution, and prospects and needs for constitutional change as Myanmar moves towards democracy and the rule of law. Much has been made of the Constitution's rigidity, which is seen as an obstacle to reform and inconsistent with embracing the rule of law, human rights and multi-party democracy, especially with a rapidly transforming state and society. Nonetheless, the Constitution is also seen as having potential to be a very positive force for reform. Many issues arise now for constitutionalism and constitutional change: presidency; federalism and territorial governance; the status of minorities and freedom of religion; civil liberties in what is described as a 'discipline-flourishing democracy'; the courts, justice and the rule of law; the electoral system; and many more. This book is an attempt to gauge the extent and potential for the entrenchment of constitutionalism in Myanmar in a rapidly changing environment. Practical Financial Modelling, 3e is a book on model development and model assurance. It enhances the modelling process by emphasizing controls and checks for accuracy and reliability. New content on validation and verification, model use and sensitivity analysis is presented alongside a modelling methodology that underpins the various proprietary standards used in financial modelling today. It provides more details than other books and yet is general enough for applying its methodology to many applications. This book isn't just about the details of building cash flow models, it's about building better cash flow models. This new edition increases the number of worked examples and introduces new material on the audit sheet and audit workbook methodologies, and the delta sheet approach to sensitivity analysis. It provides the developer with a toolkit of modelling techniques and a framework of error controls to reduce the risk of spreadsheet error. The methodology and structure conforms with the modelling principles defined by the Institute of Chartered Accountants of England and Wales; and the model assurance processes ensure compliance with the UK public sector Macpherson Report and regulatory requirements such as Sarbanes-Oxley.
