The OECD Teaching and Learning International Survey (TALIS) is the largest international survey asking teachers and school leaders about their working conditions and learning environments, and provides a barometer of the profession every five years. Results from the 2018 cycle explore and examine the various dimensions of teacher and school leader professionalism across education systems. Now in its seventh edition, *Creativity in the Classroom* helps teachers link creativity research and theory to the everyday activities of classroom teaching. Ideal reading for any course dealing wholly or partially with creativity and teaching, this foundational textbook covers definitions, research, and theory in the first half, and reflects on classroom practices in the second. Thoroughly revised and updated, the seventh edition features new research on neuroscience and creativity in specific disciplines; new sections on social-emotional learning, teaching engineering, and leadership; and an entire new chapter on building creativity at the school or district level. *Prevention and Management of Cardiovascular and Metabolic Disease* Provides accurate and well-documented information on the impact of diet and physical activity in the prevention and management of cardiovascular and metabolic diseases and healthy aging. This

authoritative textbook examines the independent and combined impact of diet and physical activity in the prevention and management of cardiovascular and metabolic diseases, with special emphasis on the elderly populations. In this book the authors: Provide the latest data on the association between a suboptimal diet and physical inactivity and chronic disease. Examine the role of epigenetics on longevity. Discuss the fundamentals of healthy aging. Highlight the role of well-known dietary patterns such as the Mediterranean diet and the Nordic diet in favorable health outcomes, including cardiovascular, metabolic health, and healthy aging. Discuss the health outcomes of physical activity and healthy aging. Present the most recent evidence-based data on the independent and synergistic impact of diet and exercise on disease prevention and management including, heart disease, diabetes mellitus, hypertension, dyslipidemia, kidney failure, cancer and other conditions.

*Prevention and Management of Cardiovascular and Metabolic Disease: Diet, Physical Activity and Healthy Aging* is an excellent textbook for upper-level undergraduate and graduate students in medical and health-related disciplines and for health professionals, including dietitians and nutritionists, exercise physiologists, athletic trainers, nurses, physicians, geriatricians, and other health professionals with a special focus in older adults. This book is also a highly useful reference for health professionals interested in introducing diet and physical activity as an intervention for healthy aging as well as the prevention and management of cardiovascular and other metabolic diseases that are prevalent in aging populations.

2024-25 IAS All States PSC General Studies General Science & Science Technology Solved Papers 416 795 E. This book contains 380 solved papers and 4816 objective questions. While there are plenty of texts out there on adapted physical activity, there are none like this one. That's because *Adapted Physical Activity Across the Life Span* takes an interdisciplinary, life span approach and provides content on DEI

(diversity, equity, and inclusion), social justice, and SEL (social-emotional learning) that other texts either skim over or skip entirely. Adapted Physical Activity Across the Life Span features the following: Interviews with professionals that provide students with real-life stories from educators, health care professionals, and others who work with people with disabilities Chapter objectives, chapter summaries, tables, and charts that emphasize key concepts An interdisciplinary approach and life span approach to show students the broad scope of careers across education, clinical, and community settings Content on adapted physical education for children and young people to educate students in the full implementation of IDEA and physical education for children with disabilities, including assessments, IEPs, and program modifications Content on adapted physical activity for adults to enable students to understand the roles of various professions that facilitate adapted physical activity for adults—from those who recently finished high school to senior citizens—using the Healthy People guidelines, research, and the most contemporary model of aging Information about adapted physical activity for early childhood, with a focus on professions that help a young child with a disability begin their journey of adapted physical education Instructor ancillaries to make it easier for instructors to prepare for and teach the course The interdisciplinary approach provides instructors greater flexibility for courses that include students not only from adapted physical education but also from allied health professions: occupational therapy, physical therapy, speech and language pathology, nursing, medicine, sport psychology, exercise physiology, therapeutic recreation, and more. “Today, the interdisciplinary nature of service in adapted physical activity begins in the earliest ages and continues with professionals who instruct and nurture the physical activity of the oldest of our communities,” says coauthor Carol Leitschuh. “This is the life span approach.” Coauthor Marquell Johnson adds, “The interdisciplinary approach

and life span approach provide a much wider view of helping people with disabilities achieve optimal health. Most texts focus on a narrower perspective, such as in school, in a medical or community setting, or with a certain age group. However, this book looks at all the professions that are involved in a person's life throughout the life span and offers a coordinated approach." Adapted Physical Activity Across the Life Span will help prepare future professionals to serve individuals who require adaptations to be able to enjoy full and healthy active lives over their lifetimes. From infants to the elderly, all across the life span, people can be physically active—and this text will help them be just that. The way in which industrial activities are organised among firms is a fundamental theoretical concern. In practice, firms have found these matters, referred to as make-or-buy issues, difficult to analyse. Organising Industrial Activities Across Firm Boundaries succeeds in combining an analysis of the theoretical background to such issues with an in-depth case study of the practical consequences and implications. The book is an important contribution to the literature on networks, business relationships, out-sourcing and the division of labour. Activities for English Language Learners Across the Curriculum is a must-have resource that features activities designed to help students improve English skills. Easy-to-use lessons are provided in each content area and include step-by-step instructions, as well as suggestions for whole and small group instruction and modifications based on students' levels of language proficiency. Definitely an invaluable resource for diverse classrooms, this book also includes background information on language acquisition and language proficiency level. In addition, new Bloom's Taxonomy questions are included to promote oral language development skills. Jump-starts the class with quick, easy-to-use activities Builds poetry analysis skills Broadens cultural literacy with timeless poems Connects poetry to students' lives through interdisciplinary The statistics are disturbing:

steadily rising numbers of sedentary overweight children and obese teens, and a generation looking at a shorter life expectancy than their parents'. But while it may be obvious that physical fitness benefits both the mind and body, a growing research base is supplying evidence of why this is so, and how these benefits may be reproduced in greater numbers. *Physical Activity Across the Lifespan* makes a clear, scientific case for exercise, sports, and an active lifestyle in preventing illness and establishing lifetime health habits at both the individual and the population levels. The book focuses on key aspects of physical/mental well-being—weight, mood, and self-regulation—and the role of physical activity in public health and school-based interventions targeting these areas. Contributors review definitional and measurement issues salient to understanding what physical activity is, to analyzing benefits of participation, and to implementing effective interventions. Also addressed are limitations of current research, steps needed to continue building the field, and emerging therapeutic possibilities for activity, such as the role of rough and tumble play in preventing ADHD. Included in the coverage: Physical activity, cognition, and school performance. The influence of social and built environments on physical activity in middle-aged and older adults. Preventing and treating obesity through physical activity. Physical activity in preventing drug use and treating chemical dependence. Antidepressant properties of physical activity. Schools as a foundation for physical activity and an active lifestyle. Physical activity as an adjunct or booster to existing interventions. *Physical Activity Across the Lifespan* is an innovative text for researchers and practitioners in various disciplines including health promotion/disease prevention, child and school psychology, education, health psychology, and public health, as well as program developers and policymakers in these areas. There is overwhelming evidence linking increased physical activity with positive changes in cognitive functioning and brain

health. Much of what we know about these interrelationships comes from aerobic exercise training studies with older adults and children. This literature has paved the way for the neuroscientific investigation of mechanisms responsible for exercise-induced cognitive and brain health enhancement, a list that ranges from molecular changes to systemic changes in executive control and neural connectivity. A new perspective has also emerged that aims to understand executive control processes that may underlie the regulation of health behavior. In accordance with this view, physical activity falls under the umbrella of health behaviors that require a substantial amount of executive control. Executive control is a limited resource, and the aging process depletes this resource. People who regularly exercise are said to have higher “self-regulatory control”—planning, goal-shielding and impulse control—than irregular exercisers. The successful maintenance of physical activity participation in lieu of daily cognitive stressors likely reflects an adaptive resistance to control failures. Indeed, a handful of studies have shown the relationship between greater executive control and subsequently higher levels of physical activity. However, little is known about the neural correlates of physical activity adherence or sedentary behavior, with the view that neurocognitive factors have an antecedent and reciprocal influence on these behaviors. No research has focused on the brain networks responsible for the self-regulation of physical activity, which likely overlaps with structures and functions playing critical roles in the regulation of other health behaviors. Interdisciplinary investigations are needed to explain the extent to which physical activity self-regulation and self-regulatory failure is dependent upon, or under the influence of executive control processes and brain networks. Understanding the degree to which self-regulatory resources may be enhanced, restored, and trained will have enormous implications for basic science and applied fields. It is also of great import to understand whether or

not physical activity self-regulation is a domain-specific behavior associated with specific brain networks, or to determine the extent to which regulatory network-sharing occurs. The aim of this Frontiers Research Topic is to curate contributions from researchers in social and cognitive neurosciences and related fields, whose work involves the study of physical activity behavior, self-regulation and executive control. For this Research Topic, we, therefore, solicit reviews, original research articles, and opinion papers, which draw theoretical or empirical connections related to sustained physical activity behavior, self-regulatory strategies, cognitive performance, and brain structure and function. While focusing on work in the neurosciences, this Research Topic also welcomes contributions in the form of behavioral studies, psychophysiological investigations, and methodological innovations. This Frontiers Research Topic will carve out new directions for the fields of exercise, cognitive, and social neurosciences. We hope you will consider submitting your work. This collection of ideas and lesson plans will help classroom and homeschool teachers integrate art into their general curriculum. These inventive and effective methods use the visual arts to inspire creative writing and drama; explore math, music, science, and history; and cultivate critical thinking skills. Art instructors will learn strategies for incorporating other areas of study into the art classroom. Ranging from thought-provoking suggestions to concrete, hands-on lesson plans, these activities include an extensive resource list for classroom teachers without an art background. Not a new version - included warning for self signed X509 certificates - see section 5.2 This IBM® Redbooks® publication describes the concepts, architecture, and implementation of the IBM XIV® Storage System. The XIV Storage System is a scalable enterprise storage system that is based on a grid array of hardware components. It can attach to both Fibre Channel Protocol (FCP) and IP network Small Computer System Interface (iSCSI) capable hosts. This system is

a good fit for clients who want to be able to grow capacity without managing multiple tiers of storage. The XIV Storage System is suited for mixed or random access workloads, including online transaction processing, video streamings, images, email, and emerging workload areas, such as Web 2.0 and cloud storage. The focus of this edition is on the XIV Gen3 running Version 11.5.x of the XIV system software, which brings enhanced value for the XIV Storage System in cloud environments. It offers multitenancy support, VMware vCloud Suite integration, more discrete performance classes, and RESTful API enhancements that expand cloud automation integration. Version 11.5 introduces support for three-site mirroring to provide high availability and disaster recovery. It also enables capacity planning through the Hyper-Scale Manager, mobile push notifications for real-time alerts, and enhanced security. Version 11.5.1 supports 6TB drives and VMware vSphere Virtual Volumes (VVOL). In the first few chapters of this book, we describe many of the unique and powerful concepts that form the basis of the XIV Storage System logical and physical architecture. We explain how the system eliminates direct dependencies between the hardware elements and the software that governs the system. In subsequent chapters, we explain the planning and preparation tasks that are required to deploy the system in your environment by using the intuitive yet powerful XIV Storage Manager GUI or the XIV command-line interface. We also describe the performance characteristics of the XIV Storage System and present options for alerting and monitoring, including enhanced secure remote support. This book is for IT professionals who want an understanding of the XIV Storage System. It is also for readers who need detailed advice on how to configure and use the system. This edited collection problematizes trajectories of health promotion across the lifespan. It provides a distinctive critical social science perspective of the various directions taken by dominant policies in their approach to promoting sport for all

ages. It offers an array of theoretical and methodologically diverse perspectives on this topic, and highlights the intersections between different life stages and social, economic and cultural factors in the developed world, including class, gender, ability, family dynamics and/or race. *Sport and Physical Activity across the Lifespan* critically explores dominant policies of age-focused sport promotion in order to highlight its implications within the context of particular life stages as they intersect with social, cultural and economic factors. This includes an examination of organised sport for pre-schoolers; 'at-risk' youth sport programmes; and the creation of sporting sub-cultures within the mid-life 'market'. This book will be of interest to those wanting to learn more about how age and life stages affect the way people think about and participate in sport, and to better understand the impacts of sport across the lifespan.

- Best Selling Book in English Edition for IGNOU B.Ed Mathematics Entrance Exam with objective-type questions as per the latest syllabus.
- IGNOU B.Ed Maths Preparation Kit comes with 15 Practice Tests with the best quality content.
- Increase your chances of selection by 16X.
- IGNOU B.Ed Mathematics Exam Prep Kit comes with well-structured and 100% detailed solutions for all the questions.
- Clear exam with good grades using thoroughly Researched Content by experts.

The book deals with the effective operation of the rules related to biomedical research and pays attention to the activities of the national legislatures of the 27 Member States in the field of scientific research. This multilevel system has an impact on biobanking activity. The book answers questions realized by operators on the main biobanks around the EU in the field of GDPR. The authors and editors used the questions born from brainstorming among members of the Association European, Middle East & Africa for Biopreservation and Biobanking (ESBB) to offer to the operators in biobanking activity and researchers quickly answer to their daily questions, but with authors highest quality. Further the book provides a comprehensive review of the

rapidly expanding field of biobanking. It provides researchers and scholars working on biobanking and bio-sharing and more in general in the university hospitals and clinical trial consortiums, and companies, biomedical researchers, but also jurists and the professionals (in particular judges, lawyers, officers) an instrument rigorous but easy to use of the GDPR in the case of biobanking activities. The book identifies a methodological path to tackle the legal or ethical problem on a specific scientific-technological to verify existing solutions and give ideas for future applications. The importance of the legal solution influences the implementation of the development of the biobanking activity service itself. This book constitutes the revised selected papers of the Second International Workshop on Understanding Human Activities through 3D Sensors, UHA3DS 2016, that was held in conjunction with the 23rd International Conference on Pattern Recognition, ICPR 2016, held in Cancun, Mexico, in December 2016. The 9 revised full papers were carefully reviewed and selected from 12 submissions. The papers are organized in topical sections on Behavior Analysis, Human Motion Recognition, and Application Datasets. This report aims to provide an in-depth analysis of teachers' and school leaders' perceptions of the value of their profession, their work-related well-being and stress, and their satisfaction with their working conditions. It also offers a description of teachers' and school leaders' contractual arrangements, opportunities to engage in professional tasks such as collaborative teamwork, autonomous decision making, and leadership practices. This collection demonstrates the use and variety of applications of time use methodology from multidisciplinary, multinational, and multicultural perspectives. A distinguished roster of contributors from such fields as psychology, occupational therapy, sociology, economics, and architecture examines the complex relationship between human time utilization and health and well-being and evaluates the future of time use analysis as a research tool in the social

sciences. Everyone learns best when they are enjoying an activity - even adults prefer to learn through play! This book gives a wide range of ideas and practical activities to use computer games as learning tools with students aged 11+. You don't need to be a computer whiz to use this book. From the practical aspects of purchasing and setting up equipment to integrating them into a lesson plan - and even using them without playing them - this book will add a new aspect to your subject to make it even more engaging and fascinating to your students. There are sections on:

- Integrating games into lessons
- Activities for using freely and commonly-available computer games and consoles
- Making your own games, and helping students to design computer games themselves
- Using games to differentiate for students of varying abilities and learning styles

By adding a new dimension to learning and teaching, computer games can be an enjoyable and fun addition to lessons and, as a result, produce lifelong learners.

*Gender and Sexuality Diversity in a Culture of Limitation* provides an outstanding and insightful critique of the ways that contemporary education is impacted by a range of political, social and cultural influences that inform the approaches that schools take in relation to gender and sexuality diversity. By applying feminist poststructural and Foucauldian frameworks, the book examines the ongoing impact of broader socio-cultural discourse on the lives of gender and sexuality diverse students and teachers. Beginning with an overview of the impact of how a culture of limitation is realised in Australia, the focus moves beyond this context to examine state and federal policies from comparable societies in countries including the USA and the UK and their effect on the production of knowledges and what's permissible to include in educational curriculum. This research-driven book thus provides a comparative, international overview of the current state of gender and sexuality diversity in schools, and convincingly demonstrates that despite some empowerment of gender and sexuality diverse individuals, silencing and

marginalization remain powerful forces. This book will be of great interest to graduate and postgraduate students, academics, professionals, and policy makers interested in the field of gender and sexuality in education. It is essential reading for those involved in pre-service and in-service teacher education, diversity education, the sociology of education, as well as education more generally.
