Surface Temperature Reconstructions for the Last 2,000 Years National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Surface Temperature Reconstructions for the Last 2,000 Years, 2007-01-05 In response to a request from Congress, Surface Temperature Reconstructions for the Last 2,000 Years assesses the state of scientific efforts to reconstruct surface temperature records for Earth during approximately the last 2,000 years and the implications of these efforts for our understanding of global climate change. Because widespread, reliable temperature records are available only for the last 150 years, scientists estimate temperatures in the more distant past by analyzing proxy evidence which includes tree rings, corals, ocean and lake sediments, cave deposits, ice cores, boreholes, and glaciers. Starting in the late 1990s, scientists began using sophisticated methods to combine proxy evidence from many different locations in an effort to estimate surface temperature changes during the last few hundred to few thousand years. This book is an important resource in helping to understand the intricacies of global climate change.

Managing Climate Risk in the U.S. Financial System Leonardo Martinez-Diaz, Jesse M. Keenan, 2020-09-09 This publication serves as a roadmap for exploring and managing climate risk in the U.S. financial system. It is the first major climate publication by a U.S. financial regulator. The central message is that U.S. financial regulators must recognize that climate change poses serious, emerging risks to the U.S. financial system and they should move urgently and decisively to measure, understand, and address these risks. Achieving this goal calls for strengthening regulators' capabilities, expertise, and data, and tools to better monitor, analyze, and quantify climate risks. It calls for working closely with the private sector to ensure that financial institutions and market participants do the same. And it calls for policy and regulatory choices that are flexible, open-ended, and adaptable to new information about climate change and its risks, based on close and iterative dialogue with the private sector. At the same time, the financial community should not simply be reactive; it should provide solutions. Regulators should recognize that the financial system can itself be a catalyst for investments that accelerate economic resilience and the transition to a net-zero emissions economy. Financial innovations in the form of new financial products, services, and technologies can help the U.S. economy better manage climate risk and help channel more capital into technologies essential for the transition. <https://doi.org/10.5281/zenodo.5247742>

Earth's Climate Response to a Changing Sun Katja Matthes,Thierry Dudok de Wit,Jean Lilensten,2021 For centuries scientists have been fascinated by the role of the Sun in the Earth s climate system Recent discoveries outlined in this book have gradually unveiled a complex picture in which our variable Sun affects the climate variability via a number of subtle pathways the implications of which are only now becoming clear This handbook provides the scientifically curious from undergraduate students to policy makers with a complete and accessible panorama of our present understanding of the Sun climate connection 61 experts from different communities have contributed to it which reflects the highly multidisciplinary nature of this topic The handbook is organised as a mosaic of short chapters each of which addresses a specific aspect and can be read independently The reader will learn about the assumptions the data the models and the unknowns behind each mechanism by which solar variability may impact climate variability None of these mechanisms can adequately explain global warming observed since the 1950s However several of them do impact climate variability in particular on a regional level This handbook aims at addressing these issues in a factual way and thereby challenge the reader to sharpen his her critical thinking in a debate that is frequently distorted by unfounded claims
