from *The Design of Marine Engines and Auxiliaries* The production of a book upon marine engine design must necessarily
involve the use of material from many sources It is so difficult to determine the ultimate source of all tills material that the
author has not attempted the task It is far easier to point out those portions of the book which have some degree of
originality and then to make a general acknowledgment of indebtedness for the remainder So far as the author knows the
following methods are original the method of design 13 to 22 the method of obtaining mean bearing loads 86 to 90 the use of
the mean lead in the solution of valve diagrams 105 the method of designing condensers 156 the method of designing turning
engines 173 to 177 In the section on Engine Balancing although no portion of the material is original much time and effort
has been expended in correlating the work of various investigators The question of pressures upon main bearings will be

found more extensively treated in a paper by the author in Vol 18 Part I of The Journal of the American Society of Naval Engineers The author wishes to acknowledge the kindness of the Newport News Shipbuilding and Dry Dock Company in permitting him to use certain drawings for Plates 1 2 and 3 About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works [Mariner IV](#) ,1965
