Financial Management Information Systems

Mar 09 2022 Since 1984, the World Bank has financed 87 Financial Management Information System (FMIS) projects in 51 countries totaling over US \$2.2 billion, of which US \$938 million was for FMIS related information and communication technology (ICT) solutions. This study presents the World Bank's experience with these investment operations to share the achievements and challenges observed, and provide guidance for improving the performance of future projects. The report is structured according to four overarching questions: • What historical patterns emerge from World Bank financed Treasury/FMIS projects? This includes an analysis of project scope, cost, duration, design, objectives, and ICT solutions, among other aspects. • How have such projects performed according to various criteria? • What are the key factors that contribute to the success

and failure of projects? • What have we learned that could be useful for future projects? The findings of this report are primarily based on the 2010 FMIS Database, which includes 55 closed and 32 active FMIS projects implemented between 1984 and 2010 (7 pipeline projects are also analyzed in some sections). The data was gathered primarily from internal World Bank documents and sources, and complemented with interviews with project teams. The Database contains a rich set of operational data and performance ratings for the benefit of the World Bank task teams, government officials and other specialists involved in FMIS projects. Compared to the previously prepared draft FMIS report in 2003 (Dorotinsky and Cho), this study is based on a broader set of projects and documents in analyzing the performance and outputs of the FMIS projects, and presents more in-depth analysis of the success and failure factors. Based on the findings of the current study, the interventions of the World Bank in the design

and implementation of FMIS solutions have been reasonably successful in most countries.

[Financial Management in the Sport Industry](#) Jun 23 2023 Financial Management in the Sport Industry provides readers with an understanding of sport finance and the importance of sound

financial management in the sport industry. It begins by covering finance basics and the tools and techniques of financial quantification, using current industry examples to apply the principles of financial management to sport. It then goes beyond the basics to show how financial management works specifically in sport - how decisions are made to ensure wealth maximization. Discussions include debt and equity financing, capital budgeting, facility financing, economic impact, risk and return, time value of money, and more. The final section focuses on sport finance in three sectors of the industry - public sector sports, collegiate athletics, and professional sport-providing in-depth analysis of financial management in each sector. Sidebars, case studies, concept checks, and practice problems throughout provide practical applications of the material and enable thorough study and practice. The business of sport has changed dynamically since the publication of the first edition, and this second

edition reflects the impact of these changes on financial management in the sport industry. New to this edition are changes to reflect the global nature of sport (with, for example, discussions of income tax rates in the Premiere League), expanded material on the use of spreadsheets for financial calculations, a primer on accounting principles to help students interpret financial statements, a valuation case study assignment that takes students step by step through a valuation, a new stadium feasibility analysis using the efforts of the Oakland Raiders to obtain a new stadium, a new economic impact example focusing on the NBA All Star game, and much more.
