

# What is Guided Discovery (GD)?

- Developed by Dr. Charles E. Wales at the Center for Guided Design, West Virginia University
- The focus is on the learner and is both self-paced and paced by instruction.
- Incorporated with Understanding by Design (UBD), GD builds upon a learner's innate curiosity and desire to discover to lead the learner to the knowledge on their own terms
- When combined with effective question generation (Question Formulation Technique or some other effective means) GD becomes concise and exact

**Meaningful Physical Education** Tim Fletcher, Déirdre Ní Chróinín, Douglas Gleddie, Stephanie Beni, 2021-02-25 This book outlines an approach to teaching and learning in physical education that prioritises meaningful experiences for pupils using case studies to illustrate how practitioners have implemented this approach across international contexts Prioritising the idea of meaningfulness positions movement as a primary way to enrich the quality of young people's lives shifting the focus of physical education programs to better suit the needs of contemporary young learners and resist the utilitarian health oriented views of physical education that currently predominate in many schools and policy documents The book draws on the philosophy of physical education to articulate the main rationale for prioritising meaningful experiences before identifying potential and desired outcomes for participants It highlights the distinct characteristics of meaningful physical education and its content and outlines teaching and learning principles and strategies supported by pedagogical cases that show what meaningful physical education can look like in school based teaching and in higher education based teacher education With an emphasis on good pedagogical practice this is essential reading for all pre service and in service physical education teachers or coaches working in youth sport

Modern Classical Homotopy Theory Jeffrey Strom, 2011-10-19 The core of classical homotopy theory is a body of ideas and theorems that emerged in the 1950s and was later largely codified in the notion of a model category This core includes the notions of fibration and cofibration CW complexes long fiber and cofiber sequences loop spaces and suspensions and so on Brown's representability theorems show that homology and cohomology are also contained in classical homotopy theory This text develops classical homotopy theory from a modern point of view meaning that the exposition is informed by the theory of model categories and that homotopy limits and colimits play central roles The exposition is guided by the principle that it is generally preferable to prove topological results using topology rather than algebra The language and basic theory of homotopy limits and colimits make it possible to penetrate deep into the subject with just the rudiments of algebra The text does reach advanced territory including the Steenrod algebra Bott periodicity localization the Exponent Theorem of Cohen Moore and Neisendorfer and Miller's Theorem on the Sullivan Conjecture Thus the reader is given the tools needed to understand and participate in research at part of the current frontier of homotopy theory Proofs are not provided outright Rather they are presented in the

form of directed problem sets To the expert these read as terse proofs to novices they are challenges that draw them in and help them to thoroughly understand the arguments
