Heat Convection Latif M. Jiji, 2009-11-09 Jiji's extensive understanding of how students think and learn what they find difficult and which elements need to be stressed is integrated in this work. He employs an organization and methodology derived from his experience and presents the material in an easy to follow form using graphical illustrations and examples for maximum effect. The second enlarged edition provides the reader with a thorough introduction to external turbulent flows written by Glen Thorncraft. Additional highlights of note: Illustrative examples are used to demonstrate the application of principles and the construction of solutions; solutions follow an orderly approach used in all examples; systematic problem solving methodology emphasizes logical thinking, assumptions, approximations, application of principles, and verification of results; Chapter summaries help students review the material; Guidelines for solving each problem can be selectively given to students.

Heat Conduction Latif M. Jiji, Amir H. Danesh-Yazdi, 2024-02-02 This textbook presents the classical topics of conduction, heat transfer, and extends the coverage to include chapters on perturbation methods, heat transfer in living tissue, numerical solutions using MATLAB, and microscale conduction. This makes the book unique among the many published textbooks on conduction, heat transfer. Other noteworthy features of the book are: The material is organized to provide students with the tools to model, analyze, and solve a wide range of engineering applications involving conduction, heat transfer. Mathematical techniques and numerical solvers are explained in a clear and simplified fashion to be used as instruments in obtaining solutions. The simplicity of one-dimensional conduction is used to drill students in the role of boundary conditions and to explore a variety of physical conditions that are of practical interest. Examples are carefully selected to illustrate the application of principles and construction of solutions. Students are trained to follow a systematic problem solving methodology with emphasis on thought process, logic, reasoning, and verification. Solutions to all examples and end of chapter problems follow an orderly problem solving approach.
