Human Dimension and Interior Space Julius Panero, Martin Zelnik, 2014-01-21 The study of human body measurements on a comparative basis is known as anthropometrics Its applicability to the design process is seen in the physical fit or interface between the human body and the various components of interior space Human Dimension and Interior Space is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors including interior designers architects furniture designers builders industrial designers and students of design The use of anthropometric data although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process This comprehensive overview of anthropometrics consists of three parts The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established The second part contains easy to read illustrated anthropometric tables which provide the most current data available on human body size organized by age and percentile groupings Also included is data relative to the range of joint motion and body sizes of children The third part contains hundreds of dimensioned drawings illustrating in plan and section the proper anthropometrically based relationship between user and space The types of spaces range from residential and commercial to recreational and institutional and all dimensions include metric conversions In the Epilogue the authors challenge the interior design profession the building industry and the furniture manufacturer to seriously explore the problem of adjustability in design They expose the fallacy of designing to accommodate the so called average man who in fact does not exist Using government data including studies prepared by Dr Howard Stoudt Dr Albert Damon and Dr Ross McFarland formerly of the Harvard School of Public Health and Jean Roberts of the U S Public Health Service Panero and Zelnik have devised a system of interior design reference standards easily understood through a series of charts and situation drawings With Human Dimension and Interior Space these standards are now accessible to all designers of interior environments

In Defense of Housing Peter Marcuse, David Madden, 2024-08-27 In every major city in the world there is a housing crisis How did this happen and what can we do about it Everyone needs and deserves housing But today our homes are being transformed into commodities making the inequalities of the city ever more acute Profit has become more important than social need The poor are forced to

pay more for worse housing Communities are faced with the violence of displacement and gentrification And the benefits of decent housing are only available for those who can afford it In *Defense of Housing* is the definitive statement on this crisis from leading urban planner Peter Marcuse and sociologist David Madden They look at the causes and consequences of the housing problem and detail the need for progressive alternatives The housing crisis cannot be solved by minor policy shifts they argue Rather the housing crisis has deep political and economic roots and therefore requires a radical response *Why Don't Students Like School?* Daniel T. Willingham, 2009-06-10 Easy to apply scientifically based approaches for engaging students in the classroom Cognitive scientist Dan Willingham focuses his acclaimed research on the biological and cognitive basis of learning His book will help teachers improve their practice by explaining how they and their students think and learn It reveals the importance of story emotion memory context and routine in building knowledge and creating lasting learning experiences Nine easy to understand principles with clear applications for the classroom Includes surprising findings such as that intelligence is malleable and that you cannot develop thinking skills without facts How an understanding of the brain's workings can help teachers hone their teaching skills Mr Willingham's answers apply just as well outside the classroom Corporate trainers marketers and not least parents anyone who cares about how we learn should find his book valuable reading *Wall Street Journal* **Inequality, Crime and Public Policy (Routledge Revivals)** John Braithwaite, 2013-09-13 First published in 1979 *Inequality Crime and Public Policy* integrates and interprets the vast corpus of existing research on social class slums and crime and presents its own findings on these matters It explores two major questions First do policies designed to redistribute wealth and power within capitalist societies have effects upon crime Second do policies created to overcome the residential segregation of social classes have effects on crime The book provides a brilliantly comprehensive and systematic review of the empirical evidence to support or refute the classic theories of Engels Bonger Merton Cloward and Ohlin Cohen Miller Shaw and McKay amongst many others Braithwaite confronts these theories with evidence of the extent and nature of white collar crime and a consideration of the way law enhancement and law enforcement might serve class interest
