Semiconductor Laser Engineering, Reliability and Diagnostics Peter W. Epperlein,2013-01-25 This reference book provides a fully integrated novel approach to the development of high power single transverse mode edge emitting diode lasers by addressing the complementary topics of device engineering reliability engineering and device diagnostics in the same book and thus closes the gap in the current book literature Diode laser fundamentals are discussed followed by an elaborate discussion of problem oriented design guidelines and techniques and by a systematic treatment of the origins of laser degradation and a thorough exploration of the engineering means to enhance the optical strength of the laser Stability

criteria of critical laser characteristics and key laser robustness factors are discussed along with clear design considerations in the context of reliability engineering approaches and models and typical programs for reliability tests and laser product qualifications Novel advanced diagnostic methods are reviewed to discuss for the first time in detail in book literature performance and reliability impacting factors such as temperature stress and material instabilities Further key features include practical design guidelines that consider also reliability related effects key laser robustness factors basic laser fabrication and packaging issues detailed discussion of diagnostic investigations of diode lasers the fundamentals of the applied approaches and techniques many of them pioneered by the author to be fit for purpose and novel in the application systematic insight into laser degradation modes such as catastrophic optical damage and a wide range of technologies to increase the optical strength of diode lasers coverage of basic concepts and techniques of laser reliability engineering with details on a standard commercial high power laser reliability test program Semiconductor Laser Engineering Reliability and Diagnostics reflects the extensive expertise of the author in the diode laser field both as a top scientific researcher as well as a key developer of high power highly reliable devices With invaluable practical advice this new reference book is suited to practising researchers in diode laser technologies and to postgraduate engineering students

Television Alexander B. Magoun, 2007-06-30 For better or worse television has been the dominant medium of communication for 50 years Almost all American households have a television set many have more than one Transmitting images and sounds electronically is a relatively recent invention one that required passionate inventors determined businessmen government regulators and willing consumers This volume in the Greenwood Technographies series covers the entire history of television from 19th century European conceptions of transmitting moving images electrically to the death of TV as a discrete system in a digital age Magoun also discusses the changing face of television in the displays that people watch around the globe *Television The Life Story of a Technology* appeals to students and lay readers alike in highlighting key events and people the American engineers and entrepreneurs such as Vladimir Zworykin and David Sarnoff who ignited the television industry the bloom of programming choices in tandem with the Baby Boom generation the development of cable and satellite TV the Asians who innovated American inventions in videorecording and flat panel displays the use of TV in wartime and the new worlds of digital and high definition television Based on the latest research this crisply written sometimes provocative survey includes a glossary timeline and bibliography for further information

Science Research Writing: For Native And Non-native Speakers Of English (Second Edition) Hilary Glasman-deal, 2020-11-27 This book enables STEM researchers to write effective papers for publication as well as other research related texts such as a doctoral thesis technical report or conference abstract *Science Research Writing* uses a reverse engineering approach to writing developed from extensive work with STEM researchers at Imperial College London This approach unpacks current models of STEM research writing and helps writers to generate the writing tools needed to operate those models effectively in their own field The

reverse engineering approach also ensures that writers develop future proof strategies that will evolve alongside the coming changes in research communication platforms The Second Edition has been extensively revised and updated to represent current practice and focuses on the writing needs of both early stage doctoral STEM researchers and experienced professional researchers at the highest level whether or not they are native speakers of English The book retains the practical user friendly format of the First Edition and now contains seven units that deal separately with the components of written STEM research communication Introduction Methods Results Discussion Conclusion Abstract and Title as well as extensive FAQ responses and a new Checklist and Tips section Each unit analyses extracts from recent published STEM journal papers to enable researchers to discover not only what to write but crucially how to write it The global nature of science research requires fast accurate communication of highly complex information that can be understood by all participants Like the First Edition the Second Edition is intended as a fast do it yourself guide to make both the process and the product of STEM research writing more effective
