Mathematically Robert F. Blitzer, 2013-08-28 Blitzer continues to raise the bar with his engaging applications developed to motivate students from diverse majors and backgrounds. *Thinking Mathematically* Fifth Edition draws from the author's unique background in art psychology and math to present math in the context of real world applications. Students in this course are not math majors and they may never take a subsequent math course so they are often nervous about taking the class. Blitzer understands those students' needs and provides helpful tools in every chapter to help them master the material. Voice balloons appear right when students need them, showing what an instructor would say when leading a student through the problem. Study tips, chapter review grids, Chapter Tests, and abundant exercises provide ample review and practice. The Fifth Edition's MyMathLab course boasts more than 2,000 assignable exercises plus a new question type for applications-driven questions that correlate to section openers in the textbook. Chapter Test Prep Videos show students how to work out solutions to the Chapter Tests; the videos are available on DVD in MyMathLab and on YouTube. *Advancing Online*

Teaching Kevin Kelly, Todd D. Zakrajsek, 2023-07-03 The goal of teaching online is fundamentally the same as teaching face-to-face: facilitating the learning of all students to the greatest extent possible. This book differs from other books on online teaching in that in the process of offering guidance on course design and planning, developing outcomes and appropriate engaging activities, managing the workload and assessment, the authors pay explicit attention throughout to the distinct and diverse needs of students and offer effective strategies to accommodate them in a comprehensive and inclusive way by using the principles of Universal Design for Learning. By following those principles from the outset when planning a course, all students will benefit, and most particularly those whom the research shows have the greatest achievement gaps when taking online courses: males, first generation, and low-income students; those from underrepresented minority groups; the academically underprepared; students with disabilities; and those with limited online access or lacking readiness for online learning. Beyond good planning and design, Kelly and Zakrajsek offer ideas for creating inclusive course environments and activities such as using culturally appropriate content and making it accessible in multiple formats. They also share methods to foster faculty-learner interaction and increase personal connections with students and among students through group activities or learning communities, which are so critical to motivation and success. Faculty new to online teaching, as well as more experienced readers, will find a wealth of practical guidance on developing and honing both fully online and blended courses, and as importantly, a wealth of proven ideas to help the new generation of students with diverse needs to succeed.
