Deep Learning in Introductory Physics Mark J. Lattery, 2016-10-01 Deep Learning in Introductory Physics Exploratory Studies of Model Based Reasoning is concerned with the broad question of how students learn physics in a model centered classroom The diverse creative and sometimes unexpected ways students construct models and deal with intellectual conflict provide valuable insights into student learning and cast a new vision for physics teaching This book is the first publication in several years to thoroughly address the coherence versus fragmentation debate in science education and the first to advance and explore the hypothesis that deep science learning is regressive and revolutionary Deep Learning in Introductory Physics also contributes to a growing literature on the use of history and philosophy of science to confront difficult theoretical and practical issues in science teaching and addresses current international concern over the state of science education and appropriate standards for science teaching and learning The book is divided into three parts Part I introduces the framework agenda and educational context of the book An initial study of student modeling raises a number of questions about the nature and goals of physics education Part II presents the results of four exploratory case studies These studies reproduce the results of Part I with a more diverse sample of students under new conditions a public debate peer discussions and group interviews and with new research prompts model building software bridging tasks and elicitation strategies Part III significantly advances the emergent themes of Parts I and II through historical analysis and a review of physics education research

ENDORSEMENTS In Deep Learning in Introductory Physics Lattery describes his extremely innovative course in which students ideas about motion are elicited evaluated with peers and revised through experiment and discussion The reader can see the students deep engagement in constructive scientific modeling while students deal with counter intuitive ideas about motion that challenged Galileo in many of the same ways Lattery captures students engaging in scientific thinking skills and building difficult conceptual understandings at the same time This is the double outcome that many science educators have been searching for The case studies provide inspiring examples of innovative course design student sensemaking and reasoning and deep conceptual change

John Clement University of Massachusetts Amherst Scientific Reasoning Research Institute Deep Learning in Introductory Physics is an extraordinary book and an important intellectual achievement in many senses It offers new perspectives on science education that will be of interest to practitioners to education researchers as well as to philosophers and historians of science Lattery combines insights into model based thinking with instructive examples from the history of science such as Galileo s struggles with understanding accelerated motion to introduce new ways of teaching science The book is based on first hand experiences with innovative teaching methods reporting student s ideas and discussions about motion as an illustration of how modeling and model building can help understanding science Its lively descriptions of these experiences and its concise presentations of insights backed by a

Crying in H Mart Michelle Zauner,2021-04-20 1 NEW YORK TIMES BESTSELLER From the indie rock sensation known as Japanese Breakfast an unforgettable memoir about family food grief love and growing up Korean American in losing her mother and cooking to bring her back to life Zauner became herself NPR CELEBRATING OVER ONE YEAR ON THE NEW YORK TIMES BESTSELLER LIST In this exquisite story of family food grief and endurance Michelle Zauner proves herself far more than a dazzling singer songwriter and guitarist With humor and heart she tells of growing up one of the few Asian American kids at her school in Eugene Oregon of struggling with her mother s particular high expectations of her of a painful adolescence of treasured months spent in her grandmother s tiny apartment in Seoul where she and her mother would bond late at night

over heaping plates of food As she grew up moving to the East Coast for college finding work in the restaurant industry and performing gigs with her fledgling band and meeting the man who would become her husband her Koreanness began to feel ever more distant even as she found the life she wanted to live It was her mother s diagnosis of terminal cancer when Michelle was twenty five that forced a reckoning with her identity and brought her to reclaim the gifts of taste language and history her mother had given her Vivacious and plainspoken lyrical and honest Zauner s voice is as radiantly alive on the page as it is onstage Rich with intimate anecdotes that will resonate widely and complete with family photos Crying in H Mart is a book to cherish share and reread
