The contributions in the first part 'Re-modelling logic' of this volume take account of formal logic in the theory of 'rational' argumentation. Part two contains papers that distinguish the various dialogue games for logics in terms of 'rights' and 'obligations' of the players. The authors following in the third section study the interaction between participants in a dialogue. Here the tools of the logician are used for the wider purpose of studying the nature of dialogue. The fourth section concern modes of argumentation that are actually found in philosophical texts from earlier centuries. To be followed by contributions in Part five that may be read as attempts to retrieve what was left of the spirit of criticism and debate in philosophy after the onslaught of Cartesianism and idealism. In the words of Aldous Huxley, "Every man who knows how to read has it in his power to magnify himself, to multiply the ways in which he exists, to make his life full, significant and interesting." Few people question the value of reading; in fact, most extol its virtues. As our culture becomes more complex, reading plays an increasingly greater role in satisfying personal needs and in promoting social awareness and growth. In the last 20 years, the teaching of this invaluable skill has focused so intensely on comprehension and prediction from context that it has lost sight of the significance of automaticity and fluency in the word-identification process. Reading is a synthesis of word recognition and comprehension; thus, this text is about these basic processes and their integration. A common plea from teachers today is that research and psychology be translated into teaching behavior. Therefore, the aim of this book is twofold: one, to identify, report, organize, and discuss those bits of data, research and theory that are most relevant to the teacher's understanding of the reading process; and two, to help educators to interpret and apply theory and research data to everyday classroom teaching, as well as to the problems encountered frequently in developmental and remedial teaching. Becoming a critical thinker is a straight-forward, reassuring, and complete guide to critical thinking - one that helps you to understand critical thinking and develop the skills needed to employ it. This book supports the reader to not only think critically, but to do so independently, as a student, professional, and global citizen. The book has a clear three-part structure: firstly, examining what critical thinking is; secondly, exploring the three overarching aims of critical thinking; and finally, focussing on how to develop the essential tools to support those aims. This text assumes no prior knowledge or understanding: it has been developed to gently guide the reader from school-level education to university-level thinking in a clear and engaging manner. This is the only critical thinking skills text to offer insights and advice from professionals and students, helping the reader learn from the experiences of others in a range of contexts. Each chapter also offers guided exercises, checklists, and further reading to encourage the reader to apply techniques learnt to real situations. It is also the only text to offer chapters dedicated to listening and speaking, which are often overlooked, but are vitally important skills. This is the ideal introduction to critical thinking for students across all disciplines. The book places *Answer to Job* in the context of biblical commentary, and then examines the circumstances surrounding its compositions and immediate reception. A detailed commentary on the work discusses the major methodological presuppositions informing it and explains how key Jungian concepts operate in the text. Jung's *Answer to Job: A Commentary* unravels Jung's narrative by reading it in the chronological order of the biblical events it analyses and the book to which it refers, offering a comprehensive re-reading of Jung's text.
