Construction Estimating Using Excel Steven J. Peterson MBA, PE,2017-05-03 This is the eBook of the printed book and may not include any media website access codes or print supplements that may come packaged with the bound book For beginning to intermediate courses in construction estimating in two and four year construction management programs A step by step hands on introduction to commercial and residential estimating Construction Estimating with Excel 3 e introduces readers to the fundamental principles of estimating using drawing sets real world exercises and examples The book moves step by step through the estimating process discussing the art of estimating the quantity takeoff how to put costs to the estimate and how to finalize the bid As students progress through the text they are shown how Microsoft Excel can be used to improve the estimating process Because it introduces spreadsheets as a way of increasing estimating productivity and accuracy the book can help both beginning and experienced estimators improve their skills The Third Edition gives students a broader understanding of construction estimating with a new chapter discussing the role that estimating plays in different project delivery methods and in the design process and how to use data from RSMeans To bring the book up to date the material and equipment costs and labor rates have been updated to reflect current costs and the discussion of Excel including the figures is based on Excel 2016 Additionally content throughout the book has been updated to align to ACCE and ABET student learning outcomes Student resources are available on the companion website www.pearsonhighered.com/careersresources

PSA schedule of rates for building works Carillion Services,2004 The Schedule of Rates is the best known rate guide in the construction industry and is the standard document used in public sector construction work It contains over 20 000 rates spanning the whole range of building works and materials from acid resisting asphalt flooring through to zinc secret guttering This is the first new edition for five years and can be used for both new and maintenance work

Development and Application of a Production Rate Resource for Contract Time Determination Roberto Leandro Oramas,2017 Production rates are significantly important for

contract time determination procedures as these are essential for estimating the duration of every activity needed to complete a highway construction project For this reason many estimation systems including Texas Department of Transportation s Contract Time Determination System TXCTDS explicitly depict production rate data of work items considered important in highway construction projects Though many systems and databases available in the public domain provide an abundance of production rate data they provide different rates for comparable work items This research focusses on the development of the Production Rate Resource a single easy to use reference of production rate data gathered from publicly available sources intended to be used by TXDOT contract time estimators The resource was developed by gathering production rate information through conducting a literature review and organizing the found data into a well assembled Excel workbook This arrangement contains Excel sheet tabs depicting the resource s introduction details of the included production rate sources a summary of the included work items and their respective production rate data and item worksheet tabs portraying the gathered production rate data for each work item These item worksheets also contain production rate averages graphs that allow comparison and analysis of the data through visual aid and specific scope information provided by the original sources A recommended process based on the critical path method CPM was also developed for conducting a contract time determination using the Production Rate Resource The gathered production rate data was then tested by conducting two contract time estimations of actual TXDOT highway construction projects using the recommended process The results were compared with TXDOT s contract estimations for an in depth analysis and the findings led to significant improvements to the resource The final assembly of the Production Rate Resource provides production rate data for 59 highway construction work items provided by six publicly available sources

Building Material Estimates and Rates Build Up Moremi Mareka,2009-05-29 The script is entitled Building Estimates and Rates Build Up and aims at empowering Technical educators Technical Brigades and Community colleges students Apprentices and individuals in the building profession with the necessary skill and knowledge As an experienced professional in the building industry quantity surveyor building material estimator and a former lecturer for technical colleges I have realized that there is need to come up with a book that will help students apprentices and individual builders to easily understand the subject of estimating and rates build up to enable them to apply the skill whenever they have projects Currently individual builders apprentices and students find it difficult to correctly and accurately estimate the quantities of materials required for proposed projects Pricing is also a difficult task for most of them as they do not have an idea of how to build up rates Presently our brigades and technical colleges do not have a relevant book to deal with Estimates Building Estimates and Rates build up provides a solution to such a problem The book provides a solution in that it brings together pure mathematics and practical estimation to avoid a situation whereby students end up failing to realize that the same formulas that are used in Mathematics math are applicable in the estimates I strongly believe that the book will be able to even penetrate the international market
