**Build To Order** Glenn Parry, Andrew Peter Graves, 2008-07-23

Over the past 100 years the European Automotive Industry has been repeatedly challenged by best practice First by the United States through the development of mass production pioneered by Henry Ford and more recently by lean production techniques as practised by the leading Japanese producers particularly Toyota It has consistently risen to these challenges and has shown it can compete and even outperform its competitors with world class products However the European industry is now faced with growing competition and growth from new emerging low cost countries and needs to re-define its competitive advantage to remain at the forefront of the sector Automotive growth is driven by two factors new markets and new technologies Global competition is increasing with technology and product differentiation becoming the most important sales factors but with continued cost pressure Within the market the winners will be more profitable and the losers will disappear The Automotive Industry makes a significant contribution to the socio-economic fabric of the European Union Manufacturing output represents 700 billion and research and development spending 24 billion European automotive suppliers number 5000 member companies and represent 5 million employees and generate 500 billion in revenues These are significant figures that generate wealth and high value employment within the EU European firms must consistently improve their competitive position to ensure that the industry does not migrate to growing new markets

Biomethanization of the Organic Fraction of Municipal Solid Wastes J. Mata-Alvarez, 2002-08-31

Biomethanization of the Organic Fraction of Municipal Solid Wastes is a comprehensive introduction to both the fundamentals and the more practical aspects of the anaerobic digestion of organic solid wastes particularly those derived from households that is the organic fraction of municipal solid wastes OFMSW It can be used as a textbook for specialized courses and also as a guide for practitioners In the first part the book covers the relevant aspects of anaerobic digestion AD

of organic wastes The fundamentals and kinetic aspects of AD are reviewed with particular emphasis on the aspects related to solid wastes This introduction is necessary to have a comprehensive view of the AD process and to understand the practical principles as well as the origin of possible problems arising from the management of the process Chapter 2 emphasizes the role of kinetics in designing the reactor paying special attention to existing models particularly the dynamic ones Through this introduction it is intended to facilitate the technology transfer from laboratory or pilot plant experiences to full scale process in order to implement improvements in current digesters Laboratory methods are described for the analysis and optimization of reactor performance such as methanogenic activity tests or experimental evaluation of the biodegradation kinetics of solid organic waste The different reaction patterns applied to industrial reactors are outlined Industrial reactors are classified in accordance with the system they use pointing out advantages and limitations Co digestion enabling the co treatment of organic wastes of different origin in a more economically feasible way is described in detail Examples of co digestion are given with OFMSW as a base substrate Finally full scale co digestion plants are discussed Various types mechanical biological physico chemical of pre treatment to increase the biodegradability and thus the yields of the process are reviewed in detail The use of the fermentation products of anaerobic digesters for biological nutrient removal processes in wastewater treatment plants is described This constitutes an example of integrated waste management a field in which both economic and technical advances can be achieved Balances are given to justify the approach and a full scale case study is presented The important topic of economics and the ecological advantages of the process are emphasized The use of compost the integration with composting technology and advantages over other technologies are detailed in the framework of an environmental impact assessment of biowaste treatment Finally the anaerobic digestion of MSW in landfills is reviewed in detail with emphasis on landfill process enhancement and strategies for its application
