Hydrogen Technology Aline Léon, 2008-07-18 Aline Leon In the last years public attention was increasingly shifted by the media and world governments to the concept of saving energy reducing pollution protecting the environment and developing long term energy supply solutions In parallel research funding relating to alternative fuels and energy carriers is increasing on both national and international levels Why has future energy supply become such a matter of concern The reasons are the problems created by the world s current energy supply system which is mainly based on fossil fuels In fact the energy stored in hydrocarbon based solid liquid and gaseous fuels is and will be widely consumed for internal combustion engine based transportation for electricity and heat generation in residential and industrial sectors and for the production of fertilizers in agriculture as it is convenient abundant and cheap However such a widespread use of fossil fuels by a constantly growing world population from 2.3 billion in 1939 to 6.5 billion in 2006 gives rise to the two problems of oil supply and environmental degradation The problem related to oil supply is caused by the fact that fossil fuels are not renewable primary energy sources This means that since the first barrel of petroleum has been pumped out from the ground we have been exhausting a heritage given by nature

Automotive Development Processes Julian Weber, 2009-06-22 The global crisis the automotive industry has slipped into over the second half of 2008 has set a fierce spotlight not only on which cars are the right ones to bring to the market but also on how these cars are developed Be it OEMs developing new models suppliers integrating themselves deeper into the development processes of different OEMs analysts estimating economical risks and opportunities of automotive investments or even governments creating and evaluating scenarios for financial aid for suffering automotive companies At the end of the day it is absolutely indispensable to comprehensively understand the processes of automotive development the core subject of this book Let s face it More than a century after Carl Benz Wilhelm Maybach and Gottlieb Daimler developed and produced their first motor vehicles the overall concept of passenger cars has

not changed much Even though components have been considerably optimized since then motor cars in the 21st century are still driven by combustion engines that transmit their propulsive power to the road surface via gearboxes transmission shafts and wheels which together with spring damper units allow driving stability and ride comfort Vehicles are still navigated by means of a steering wheel that turns the front wheels and the required control elements are still located on a dashboard in front of the driver who operates the car sitting in a seat

Confessions of the Pricing Man Hermann Simon, 2015-10-20 The world's foremost expert on pricing strategy shows how this mysterious process works and how to maximize value through pricing to company and customer In all walks of life we constantly make decisions about whether something is worth our money or our time or try to convince others to part with their money or their time Price is the place where value and money meet From the global release of the latest electronic gadget to the bewildering gyrations of oil futures to markdowns at the bargain store price is the most powerful and pervasive economic force in our day to day lives and one of the least understood The recipe for successful pricing often sounds like an exotic cocktail with equal parts psychology economics strategy tools and incentives stirred up together usually with just enough math to sour the taste That leads managers to water down the drink with hunches and rules of thumb or leave out the parts with which they don't feel comfortable While this makes for a sweeter drink it often lacks the punch to have an impact on the customer or on the business It doesn't have to be that way though as Hermann Simon illustrates through dozens of stories collected over four decades in the trenches and behind the scenes A world renowned speaker on pricing and a trusted advisor to Fortune 500 executives Simon's lifelong journey has taken him from rural farmers markets to a distinguished academic career to a long second career as an entrepreneur and management consultant to companies large and small throughout the world Along the way he has learned from Nobel Prize winners and leading management gurus and helped countless managers and executives use pricing as a way to create new markets grow their businesses and gain a sustained competitive advantage He also learned some tough personal lessons about value how people perceive it and how people profit from it In this engaging and practical narrative Simon leaves nothing out of the pricing cocktail but still makes it go down smoothly and leaves you wanting to learn more and do more as a consumer or as a business person You will never look at pricing the same way again
