2.1 Limits of Sequences.

CHAPTER 2

2.1.0. a) True. If  $x_n$  converges, then there is an  $M > 0$  such that  $|x_n| \leq M$ . Choose by Archimedes an  $N \in \mathbb{N}$  such that  $N > M/\epsilon$ . Then  $n \geq N$  implies  $|x_n/n| \leq M/n \leq M/N < \epsilon$ .

b) False.  $x_n = \sqrt{n}$  does not converge, but  $x_n/n = 1/\sqrt{n} \rightarrow 0$  as  $n \rightarrow \infty$ .

c) False.  $x_n = 1$  converges and  $y_n = (-1)^n$  is bounded, but  $x_n y_n = (-1)^n$  does not converge.

d) False.  $x_n = 1/n$  converges to 0 and  $y_n = n^2 > 0$ , but  $x_n y_n = n$  does not converge.

2.1.1. a) By the Archimedean Principle, given  $\epsilon > 0$  there is an  $N \in \mathbb{N}$  such that  $N > 1/\epsilon$ . Thus  $n \geq N$  implies

$$|\alpha(1 - 1/n) - \alpha| = |\alpha/n| \leq \alpha/N < \epsilon.$$

b) By the Archimedean Principle, given  $\epsilon > 0$  there is an  $N \in \mathbb{N}$  such that  $N > \alpha^2/\epsilon^2$ . Thus  $n \geq N$  implies

$$|\alpha + \alpha/\sqrt{n} - \alpha| = |\alpha/\sqrt{n}| \leq \alpha/\sqrt{N} < \epsilon.$$

c) By the Archimedean Principle, given  $\epsilon > 0$  there is an  $N \in \mathbb{N}$  such that  $N > 3/\epsilon$ . Thus  $n \geq N$  implies

$$|\beta(1 + 1/n) - \beta| = |\beta/n| \leq \beta/N < \epsilon.$$

d) By the Archimedean Principle, given  $\epsilon > 0$  there is an  $N \in \mathbb{N}$  such that  $N > 1/\sqrt[3]{3\epsilon}$ . Thus  $n \geq N$  implies

$$|\alpha(2n^2 + 1)\sqrt[3]{3n^2} - 2\alpha| = |\alpha\sqrt[3]{3n^2}| \leq \alpha\sqrt[3]{3N^2} < \epsilon.$$

2.1.2. a) By hypothesis, given  $\epsilon > 0$  there is an  $N \in \mathbb{N}$  such that  $n \geq N$  implies  $|x_n - 1| < \epsilon/2$ . Thus  $n \geq N$  implies

$$|\alpha + 2x_n - 3| = 2|x_n - 1| < \epsilon.$$

b) By hypothesis, given  $\epsilon > 0$  there is an  $N \in \mathbb{N}$  such that  $n \geq N$  implies  $x_n > 1/2$  and  $|x_n - 1| < \epsilon/4$ . In particular,  $1/x_n < 2$ . Thus  $n \geq N$  implies

$$|\alpha(x_n - 2)/x_n - (\alpha - 2)| = 2|\alpha x_n - 1|/x_n < 4|x_n - 1| < \epsilon.$$

c) By hypothesis, given  $\epsilon > 0$  there is an  $N \in \mathbb{N}$  such that  $n \geq N$  implies  $x_n > 1/2$  and  $|x_n - 1| < \epsilon/(1 + 2\epsilon)$ . Thus  $n \geq N$  and the triangle inequality imply

$$|\alpha x^2 - \epsilon|/x_n - (1 - \epsilon) = |\alpha x_n - 1| \left( 1 + \frac{\epsilon}{x_n} \right) \leq |\alpha x_n - 1| \left( 1 + \frac{\epsilon}{\overline{\alpha x_n}} \right) < |\alpha x_n - 1| (1 + 2\epsilon) < \epsilon.$$

2.1.3. a) If  $n_k = 2k$ , then  $3 - (-1)^{n_k} = 2$  converges to 2; if  $n_k = 2k + 1$ , then  $3 - (-1)^{n_k} = 4$  converges to 4. b) If  $n_k = 2k$ , then  $(-1)^{n_k} + 2 = (-1)^{2k} + 2 = 1 + 2 = 3$  converges to 3; if  $n_k = 2k + 1$ , then  $(-1)^{n_k} + 2 =$

A Problem Book in Real Analysis Asuman G. Aksoy, Mohamed A. Khamsi, 2010-03-10 Education is an admirable thing but it is well to remember from time to time that nothing worth knowing can be taught Oscar Wilde The Critic as Artist 1890 Analysis is a profound subject it is neither easy to understand nor summarize However Real Analysis can be discovered by solving problems This book aims to give independent students the opportunity to discover Real Analysis by themselves through problem solving The depth and complexity of the theory of Analysis can be appreciated by taking a glimpse at its developmental history Although Analysis was conceived in the 17th century during the Scientific Revolution it has taken nearly two hundred years to establish its theoretical basis Kepler Galileo Descartes Fermat Newton and Leibniz were among those who contributed to its genesis Deep conceptual changes in Analysis were brought about in the 19th century by Cauchy and Weierstrass Furthermore modern concepts such as open and closed sets were introduced in the 1900s Today nearly every undergraduate mathematics program requires at least one semester of Real Analysis Often students consider this course to be the most challenging or even intimidating of all their mathematics major requirements The primary goal of this book is to alleviate those concerns by systematically solving the problems related to the core concepts of most analysis courses In doing so we hope that learning analysis becomes less taxing and thereby more satisfying

*Introduction to Real Analysis* Robert G. Bartle, Donald R. Sherbert, 2011-08-24 This text provides the fundamental concepts and techniques of real analysis for students in all of these areas It helps one develop the ability to think deductively analyze mathematical situations and extend ideas to a new context Like the first three editions this edition maintains the same spirit and user friendly approach with additional examples and expansion on Logical Operations and Set Theory There is also content revision in the following areas Introducing point set topology before discussing continuity including a more thorough discussion of limsup and liminf covering series directly following sequences adding coverage of Lebesgue Integral and the construction of the reals and drawing student attention to possible applications wherever possible

*Introduction to Real Analysis, Fourth Edition* Donald R. Sherbert, Robert G. Bartle, 2020-09-08 Introduction to Real Analysis Fourth Edition by Robert G Bartle Donald R Sherbert The first three editions were very well received and this edition maintains the same spirit and user friendly approach as earlier editions Every section has been examined Some sections have been revised new examples and exercises have been added and a new section on the Darboux approach to the integral has been added to Chapter 7 There is more material than can be covered in a semester and instructors will need to make selections and perhaps use certain topics as honors or extra credit projects To provide some help for students in analyzing proofs of theorems there is an appendix on Logic and Proofs that discusses topics such as implications negations contrapositives and different types of proofs However it is a more useful experience to learn how to construct proofs by first watching and then doing than by reading about techniques of proof Results and proofs are given at a medium level of generality For instance continuous functions on closed bounded intervals are studied in detail but the proofs can be readily adapted to a more general situation This approach is used to advantage in Chapter 11 where topological concepts are discussed There are a large number of examples to illustrate the concepts and extensive lists of exercises to challenge students and to aid them in understanding the significance of the theorems Chapter 1 has a brief summary of the notions and notations for sets and functions that will be used A discussion of Mathematical Induction is given since inductive proofs arise frequently There is also a section on finite countable and infinite sets This chapter can be used to provide some practice in proofs or covered quickly or used as background material and returning later as necessary Chapter 2 presents the properties of the real number system The first two sections deal with Algebraic and Order properties and the crucial Completeness Property is given in Section 2.3 as the Supremum Property Its ramifications are discussed throughout the remainder of the chapter In Chapter 3 a thorough treatment of sequences is given along with the associated limit concepts The material is of the greatest importance Students find it rather natural although it takes time for them to become accustomed to the use of epsilon A brief introduction to Infinite Series is given in Section 3.7 with more advanced material presented in Chapter 9 Chapter 4 on limits of functions and Chapter 5 on continuous functions constitute the heart of the book The discussion of limits and continuity relies heavily on the use of sequences and the closely parallel approach of these chapters reinforces the understanding of these essential topics The fundamental properties of continuous functions on intervals are discussed in Sections 5.3 and 5.4 The notion of a gauge is introduced in Section 5.5 and used to give alternate proofs of these theorems Monotone functions are discussed in Section 5.6 The basic theory of the derivative is given in the first part of Chapter 6 This material is standard except a result of Carathéodory is used to give simpler proofs of the Chain Rule and the Inversion Theorem The remainder of the chapter consists of applications of the Mean Value Theorem and may be explored as time permits In Chapter 7 the Riemann integral is defined in Section 7.1 as a limit of Riemann sums This has the advantage that it is consistent with the student's first exposure to the integral in calculus and since it is not dependent on order properties it permits immediate generalization to complex and vector valued functions that students may encounter in later courses It is also consistent with the generalized Riemann integral that is discussed in Chapter 10 Sections 7.2 and 7.3 develop properties of the integral and establish the Fundamental Theorem and many more

*Analysis I* Terence Tao, 2016-08-29 This is part one of a two volume book on real analysis and is intended for senior undergraduate students of mathematics who have already been exposed to calculus The emphasis is on rigour and foundations of analysis Beginning with the construction of the number systems and set theory the book discusses the basics of analysis limits series continuity differentiation Riemann integration through to power series several variable calculus and Fourier analysis and then finally the Lebesgue integral These are almost entirely set in the concrete setting of the real line and Euclidean spaces although there is some material on abstract metric and topological spaces The book also has appendices on mathematical logic and the decimal system The entire text omitting some less central topics can be taught in two quarters of 25 30 lectures each The course material is deeply intertwined with the exercises as it is intended that the student actively learn the material and practice thinking and writing rigorously by proving several of the key results in the theory

*Introduction to Applied Linear Algebra* Stephen Boyd, Lieven Vandenbergh, 2018-06-07 A groundbreaking introduction to vectors matrices and least squares for engineering applications offering a wealth of practical examples
