Internal Medicine Sep 28 2023 Named one of the Best Books of the Year by Kirkus Reviews and BookPage “Illuminates human fragility in tales both lyrical and soul-wrenching.” —Danielle Ofri, New York Times Book Review In this “artful, unfailingly human, and understandable” (Boston Globe) account inspired by his own experiences becoming a doctor, Terrence Holt puts readers on the front lines of the harrowing crucible of a medical residency. A medical classic in the making, hailed by critics as capturing “the feelings of a young doctor’s three-year hospital residency . . . better than anything else I have ever read” (Susan Okie, Washington Post), Holt brings a writer’s touch and a doctor’s eye to nine unforgettable stories where the intricacies of modern medicine confront the mysteries of the human spirit. Internal Medicine captures the “stark moments of success and failure, pride and shame, courage and cowardice, self-reflection and obtuse blindness that mark the years of clinical training” (Jerome Groopman, New York Review of Books), portraying not only a doctor’s struggle with sickness and suffering but also the fears and frailties each of us—doctor and patient—bring to the bedside.

Chalk Talks in Internal Medicine Apr 23 2023 This book provides teaching scripts for medical educators in internal medicine and coaches them in creating their own teaching scripts. Every year, thousands of attending internists are asked to train the next generation of physicians to master a growing body of knowledge. Formal teaching time has become increasingly limited due to rising clinical workload, medical documentation requirements, duty hour restrictions, and other time pressures. In addition, today’s physicians-in-training expect teaching sessions that deliver focused, evidence-based content that is integrated into clinical workflow. In keeping with both time pressures and trainee expectations, academic internists must be prepared to effectively and efficiently teach important diagnostic and management concepts. A teaching script is a methodical and structured plan that aids in effective teaching. The teaching scripts in this book anticipate learners’ misconceptions, highlight a limited number of teaching points, provide evidence to support the teaching points, use strategies to engage the learners, and provide a cognitive scaffold for teaching the topic that the teacher can refine over time. All divisions of internal medicine (e.g. cardiology, rheumatology, and gastroenterology) are covered and a section on undifferentiated symptom-based presentations (e.g. fatigue, fever, and unintentional weight loss) is included. This book provides well-constructed teaching scripts for commonly encountered clinical scenarios, is authored by experienced academic internists and allows the reader to either implement them directly or modify them for their own use. Each teaching script is designed to be taught in 10-15 minutes, but can be easily adjusted by the reader for longer or shorter talks. Teaching Scripts in Internal Medicine is an ideal tool for internal medicine attending physicians and trainees, as well as physician’s assistants, nurse practitioners, and all others who teach and learn internal medicine.

Grand Rounds Aug 28 2023 The history of medicine has come to occupy a significant place in our understanding of modern society and the American cultural fabric. To fully understand and appreciate American medicine in the twentieth century one must contend with the twin processes of specialization and professionalization. Grand Rounds considers the critical period for these two processes, the years between World War I and the Vietnam era. A diverse group of contributors (clinicians as well as historians and

"participant-observers") outline broad themes involved in the evolution of modern internal medicine and trace the origins of subspecialties such as cardiology, gastroenterology, rheumatology, infectious diseases, and nephrology. Paul Beeson, Rosemary Stevens, and others discuss the literature, diagnostic approaches, and therapeutic research in the field. Grand Rounds will be of interest to historians of science and medicine, students of American civilization, and medical practitioners.

Contemporary Internal Medicine Jan 26 2021 Read with two objectives: first, to acquaint yourself with the current knowledge of a subject and the steps by which it has been reached; and secondly, and more important, read to understand and analyze your cases. William Osler, *The Student Life* What follows is a collection of cases-or more aptly, the stories of our patients and friends who have been seen at The Ohio State University Hospitals where our faculty have provided their care and about whom this volume is written. Today many fear that our patients are being moved from center stage while we are being distracted by the technology of medicine. This volume was written with patients in mind. The idea is that the most intriguing questions and the most rewarding answers begin and end at the bedside. This is a story of our patients, told by expert clinicians and spiced with commentary along the way. This volume in no way attempts to be comprehensive. Instead, it is like the practice of medicine, scattered, somewhat disjointed, while at the same time intensely personal and focused upon whatever problem the patient brings to us. The discussions are not so much about disease entities as they are about patients with problem". The two are uniquely different. For instance, when the physician suspects hepatitis, not every imaginable cause can be actively investigated. Instead, tests and procedures are discriminately chosen, a part of medicine that is still more art than science.
