In research on Information Structure, there is an ongoing discussion about the role of contrast. While most linguists consider contrast to be compatible with both focus and topic, some argue that it is an autonomous IS category. Contrast has been shown to be encoded by different linguistic means, such as specific morphemes, adverbials, clefts, prosodic cues. Hence, this concept is also related to other domains, in particular morphosyntax and prosody. The precise way in which they interact is however not yet entirely clear. Moreover, from a methodological point of view, the identification and annotation of contrast in corpora is not straightforward. This volume

provides a selection of articles discussing the definition of contrast, the importance of distinguishing different types of contrast, the use of several encoding strategies, and the annotation of contrast in corpora using the Question Under Discussion Model. The contributions offer data on English, French, French Belgian Sign Language, German, Hindi, Italian and Spanish. The objective of this project is to develop a low emissions natural gas engine. The emission targets for this project are 0.27 g/kW-hr (0.2 g/bhp-hr) of NO<sub>x</sub> and 0.013 g/kW-hr (0.01 g/bhp-hr) of particulate matter. To meet the objective, a chemically correct combustion (stoichiometric) natural gas engine with exhaust gas recirculation (EGR) and a three-way catalyst (TWC) was developed. In addition, a Sturman camless Hydraulic Valve Actuation (HVA) system was used to improve efficiency. A Volvo 11 liter diesel engine was converted to operate as a stoichiometric natural gas engine. Pistons with a 14.3:1 compression ratio were

used on this engine. Illustrations. This is a print on demand edition of a hard to find publication. EBONY is the flagship magazine of Johnson Publishing. Founded in 1945 by John H.
