Car electronics and
digital processing
technology have
been used to
improve the
efficiency and
performance of
engines for
decades, yet the
main focus is still
on static or pseudo-
static mode, while
the engines loaded
in the road vehicles
are not always
operated at static
mode. This book
describes the
behavior of engine
dynamics operated
at transient mode
as a dynamical
system, and uses
advanced control
theory to design a
real-time control
strategy that can be
used to improve
efficiency and
emission
performance. The
Just-in-time (JIT)
manufacturing
system is an

internal system in
use by its founder,
Toyota Motor
Corporation, but it
has taken on a new
look. Toyota
Production System,
Second Edition
systematically
describes the
changes that have
occurred to the
most efficient
production system
in use today. Since
the publication of
the first edition of
this book in 1983,
Toyota has

management. The addition of computer integrated technology (including expert systems by artificial intelligence) and information systems technology serve to further reduce costs, increase quality, and improve lead time. The new Toyota production system considers how to adapt production schedules to the demand changes in the marketplace while satisfying the goals of low cost, high quality, and timely delivery. The first edition of this book, *Toyota Production System*, published in 1983, is the basis for this book. It was translated into many languages including Spanish,

Russian, Italian, Japanese, etc., and has played a definite role in inspiring production management systems throughout the world. The Chairman of Toyota Motor Sales U.S.A., Inc. presents the remarkable history of the most efficient, most profitable automobile maker in the world and its revolutionary "just-in-time" production process, accompanied by sixteen pages of photographs. The following analysis illustrates the underlying trends and relationships of U.S. issued patents of the subject company. The analysis employs two frequently used patent classification

methods: US Patent Classification (UPC) and International Patent Classification (IPC). Aside from assisting patent examiners in determining the field of search for newly submitted patent applications, the two classification methods play a pivotal role in the characterization and analysis of technologies contained in collections of patent data. The analysis also includes the company's most prolific inventors, top cited patents as well as foreign filings by technology area. Chilton's original line of model-specific information covers older vehicles. Each
