

WRITING A PHILOSOPHY PAPER

Philosophical writing is different from the writing you are asked to do in other courses; these guidelines might be helpful, but do not assume that following them is enough to write a good philosophy paper.

1. What you are trying to accomplish: The virtues of a philosophy paper

A philosophy paper consists in a critical analysis of a thesis and in a reasoned defense of some claims. If you advance a claim, your claim should be supported by argument. If you attribute a view to someone, you should support your attribution with reference to the original text and interpretative remarks. When you make claims about a philosopher you have read, make sure that you support your interpretation with references to specific passages. When you take a specific formulation of a point from a text, use quotations.

The virtues of a philosophy paper are:

- **clarity:** say what you have to say simply and straightforwardly
- **depth of analysis and critical questioning:** offer a critical analysis of a philosophical issue, present and question different approaches to the same issue, and compare them.
- **consideration of arguments:** the reader is not interested in your own opinion, but in the way you reason about a particular issue, how you argue about it, how you defend your claims. You must exhibit reasons for what you hold, not just voice your concern about a particular matter. Make your reasons explicit.
- **logical organization:** everything that you write must be justified: there should be a reason why you wrote what you wrote the way you did. Use only the sentences that you need to express your claims. In order to construct an argument, each step of your reasoning should be clear and in the right order. Each paragraph should follow the previous one logically,

Neurath, 2012-12-06 The philosophical writings of Otto Neurath and their central themes have been described many times by Carnap in his autobiographical essay by Ayer and Morris and Kraft decades ago by Haller and Hegselmann and Nemeth and others in recent years How extraordinary Neurath's insights were even when they perhaps were more to be seen as conjectures aperiurus philosophical hypotheses tools to be taken up and used in the practical workshop of life and how prescient he was A few examples may be helpful 1 Neurath's 1912 lecture on the conceptual critique of the idea of a pleasure maximum ON 50 substantially anticipates the development of aspects of analytical ethics in mid century 2 Neurath's 1915 paper on alternative hypotheses and systems of hypotheses within the science of physical optics ON 81 gives a lucid account of the historically developed clashing theories of light their un realized further possibilities and the implied contingencies of theory survival in science all within his framework that antedates not only the quite similar work of Kuhn so many years later but also of the Vienna Circle too 3 Neurath's subsequent paper of 1916 investigates the inadequacies of various attempts to classify systems of hypotheses ON 82 and this volume and sets forth a pioneering conception of the metatheoretical task of scientific philosophy

Philosophical Papers Paul Humphreys, 2018-12-21 Paul Humphreys pioneered philosophical investigations into the methodological revolution begun by computer simulations. He has also made important contributions to the contemporary literature on emergence by developing the fusion account of diachronic emergence and its generalization transformational emergence. He is the discoverer of what has come to be called Humphreys Paradox in probability theory and has also made influential contributions to the literature on probabilistic causality and scientific explanation. This collection contains fourteen of his previously published papers on topics ranging from numerical experiments to the status of scientific metaphysics. There is also a previously unpublished paper on social dynamics. The volume is divided into four parts on respectively computational science, emergence, probability, and general philosophy of science. The first part contains the seminal 1990 paper on computer simulations with three other papers arguing that these new methods cannot be accounted for by traditional methodological approaches. The second part contains the original presentation of fusion emergence and three companion papers arguing for diachronic approaches to the topic rather than the then dominant synchronic accounts. The third part starts with the paper that introduced the probabilistic paradox followed by a later evaluation of attempts to solve it. A third paper argues contra Quine that probability theory is a purely mathematical theory. The final section includes papers on causation, explanation, metaphysics, and an agent-based model that shows how endogenous uncertainty undermines utility maximization. Each of the four parts is followed by a comprehensive postscript with retrospective assessments of each of the papers, replies to some responses, and in some cases elaborations of the original arguments. An introduction to the volume provides a general perspective on unifying themes that run through Humphreys' philosophical work.

Philosophical Papers Friedrich Waismann, 1977-01-31. Friedrich Waismann was born in Vienna in 1896 and lived there until the time of the Anschluss in 1938. From then until his death in 1959 he lived in England, this apart from a brief period at Cambridge early on, was almost wholly at Oxford. There he held the posts first of reader in the philosophy of mathematics and then of reader in the philosophy of science. He was of Jewish descent, his father being Russian, his mother German. He studied mathematics and physics at the University of Vienna and attended the lectures of Hahn. Beginning his career as a teacher of mathematics, he soon became an unofficial assistant to Moritz Schlick. It was Schlick's concern to see that the new philosophical ideas developed by Wittgenstein from the time of his return to philosophy in the later 1920s were made public that determined the subsequent shape of Waismann's activities. Until the outbreak of the war in 1939 his main task was the preparation of a book in which Wittgenstein's thought was to be systematically expounded. Between 1927 and 1935 this project was carried on in close personal conjunction with Wittgenstein. A first version of the planned book *Logik Sprache Philosophie* seems to have been completed by 1931. A very different version came to England with Waismann in 1938. It finally appeared in an English translation as *Principles of Linguistic Philosophy*.
