The New World of Economics, 6th edition, by Richard McKenzie and Gordon Tullock, represents a revival of a classic text that, when it was first published, changed substantially the way economics would be taught at the introductory and advanced levels of economics for all time. In a very real sense, many contemporary general-audience economics books that seek to apply the "economic way of thinking" to an unbounded array of social issues have grown out of the disciplinary tradition established by earlier editions of The New World of Economics. This new edition of The New World will expose new generations of economics students to how McKenzie and Tullock have applied in a lucid manner a relatively small number of economic concepts and principles to a cluster of topics that have been in the book from its first release and to a larger number of topics that are new to this edition, with the focus of the new topics on showing students how economic thinking can be applied to business

decision making. This edition continues the book's tradition of taking contrarian stances on important economic issues. Economics professors have long reported that *The New World* is a rare book in that students will read it without being required to do so. When it comes drawing on enduring economic principles to explain current economic realities, there is no one readers trust more than Paul Krugman. With his bestselling introductory textbook (now in a new edition) the Nobel laureate and New York Times columnist is proving to be equally effective in the classroom, with more and more instructors in all types of schools using Krugman's signature storytelling style to help them introduce the fundamental principles of economics to all kinds of students. Professor and amateur sleuth Henry Spearman uses economics to try to solve a murder while on a Caribbean vacation Cinnamon Bay seems like the ideal Caribbean getaway. But for Harvard economist and amateur detective Henry Spearman it offers an unexpected and decidedly different diversion: murder. With the police at a loss, Spearman investigates on his own, following a rather different set of laws—those of economics. Theorizing and hypothesizing, Spearman sets himself on the killer's trail as it winds from the perfect beaches and manicured lawns of a resort to the bustling old port of Charlotte Amalie to the perilous hiking trails of a dense forest. Can Spearman crack the case using economics—and before it's too late?
