

Karyotype Activity Worksheet

Background: Karyotyping is routinely used to diagnose disorders caused by abnormal chromosomes. A **karyotype** is the arrangement and classification of the complete set of chromosomes in an individual. Cells are suspended while in mitosis, when the chromosomes have condensed and are easily visualized using a light microscope. A dye is introduced to the cell, which stains certain regions of the chromosomes, producing a banding pattern (also called "G-bands"). An image is taken of the chromosomes, and they are digitally rearranged so that members of each pair are next to each other and chromosomes are arranged according to size. The analysis involves comparing chromosome number, length, placement of the centromere, and the banding pattern. Below is an example of a karyotype taken from a normal individual.

Modified with permission from the National Human Genome Research Institute

1. How are the chromosomes arranged?
2. Is this karyotype of a male or female individual?

after the Scopes trial creationism is alive and well Through local school boards sympathetic politicians and well funded organizations a strong movement has developed to encourage the teaching of the latest incarnation of creationism intelligent design as a scientifically credible theory alongside evolution in science classes Although intelligent design suffered a serious defeat in the recent Kitzmiller v Dover trial its proponents are bound to continue their assault on evolution education Now in Not in Our Classrooms parents and teachers as well as other concerned citizens have a much needed tool to use in the argument against teaching intelligent design as science Where did the concept of intelligent design originate How does it connect with and conflict with various religious beliefs Should we teach the controversy itself in our science classrooms In clear and lively essays a team of experts answers these questions and many more describing the history of the intelligent design movement and the lack of scientific support for its claims Most importantly the contributors authorities on the scientific legal educational and theological problems of intelligent design speak specifically to teachers and parents about the need to defend the integrity of science education by keeping intelligent design out of science curriculums A concluding chapter offers concrete advice for those seeking to defend the teaching of evolution in their own communities Not in Our Classrooms is essential reading for anyone concerned about defending the teaching of evolution uncompromised by religiously motivated pseudoscience in the classrooms of our public schools
