Regulating the Social George Steinmetz,1993-08-09 Why does the welfare state develop so unevenly across countries regions and localities What accounts for the exclusions and disciplinary features of social programs How are elite and popular conceptions of social reality related to welfare policies George Steinmetz approaches these and other issues by exploring the complex origins and development of local and national social policies in nineteenth century Germany Generally regarded as the birthplace of the modern welfare state Germany experimented with a wide variety of social programs before 1914 including the national social insurance legislation of the 1880s the Elberfeld system of poor relief protocorporatist policies and modern forms of social work Imperial Germany offers a particularly useful context in which to compare different programs at various levels of government Looking at changes in welfare policy over the course of the nineteenth century differences between state and municipal interventions and intercity variations in policy Steinmetz develops an account that focuses on the specific constraints on local and national policymakers and the different ways of imagining the social question Whereas certain aspects of the pre 1914 welfare state reinforced social divisions and even foreshadowed aspects of the Nazi regime other dimensions actually helped to relieve sickness poverty and unemployment Steinmetz explores the conditions that led to both the positive and the objectionable features of social policy The explanation draws on statist Marxist and social democratic perspectives and on theories of gender and culture

Handbook of Industrial Polyethylene and Technology Mark A. Spalding,Ananda Chatterjee,2017-10-26 This handbook provides an exhaustive description of polyethylene The 50 chapters are written by some of the most experienced and prominent authors in the field providing a truly unique view of polyethylene The book

starts with a historical discussion on how low density polyethylene was discovered and how it provided unique opportunities in the early days. New catalysts are presented and show how they created an expansion in available products including linear low density polyethylene, high density polyethylene, copolymers and polyethylene produced from metallocene catalysts. With these different catalyst systems a wide range of structures are possible with an equally wide range of physical properties. Numerous types of additives are presented that include additives for the protection of the resin from the environment and processing fillers, processing aids, anti-fogging agents, pigments and flame retardants. Common processing methods including extrusion, blown film, cast film, injection molding and thermoforming are presented along with some of the more specialized processing techniques such as rotational molding, fiber processing, pipe extrusion, reactive extrusion, wire and cable and foaming processes. The business of polyethylene including markets, world capacity and future prospects are detailed. This handbook provides the most current and complete technology assessments and business practices for polyethylene resins.
