NSF CAREER Proposal Writing Tips Z. J. Pei,2009-08-01 The main purpose of this book is to provide some tips to the assistant professors who plan to write their NSF CAREER proposals

Research Projects and Research Proposals Paul G. Chapin,2004-07-19 Paul Chapin s guide to writing proposals for scientific research can be used by scientists in any discipline who submit papers to funding agencies to gain support for their research projects A longtime program officer at the National Science Foundation Chapin treats the proposal as one part of a larger process of planning a research project which makes it easier to write and more likely to be effective The book differs from other guides by treating proposal writing in the larger context of project planning from an insider s perspective Paul G Chapin became the first director of the NSF Linguistics Program when it was established in October 1975 He continued as NSF s Program Director for Linguistics until 1999 with three interruptions one year serving as Deputy Division Director for Behavioral and Neural Sciences one year s detail as a staff associate to the head of the Office of Information Systems and a year s sabbatical leave to study mathematics at George Washington University From 1999 until his retirement in 2001 Chapin served as a senior program officer for cross disciplinary activities at the NSF On the occasion of his retirement the NSF presented him with the Director s Superior Accomplishment Award and the Linguistic Society of America awarded him the first annual Victoria A Fromkin Award for Distinguished Service to the Profession

The DARPA Model for Transformative Technologies:

Perspectives on the U.S. Defense Advanced Research Projects Agency William Boone Bonvillian,Richard Van Atta,Patrick Windham,2020-01-09 The authors have done a masterful job of charting the important story of DARPA one of the key catalysts of technological innovation in US recent history By plotting the development achievements and structure of the leading world agency of this kind this book stimulates new thinking in the field of technological innovation with bearing on how to respond to climate change pandemics cyber security and other global problems of our time The DARPA Model provides a useful guide for governmental agency and policy leaders and for anybody interested in the role of governments in technological innovation Dr Kent Hughes Woodrow Wilson International Center for Scholars This volume contains a remarkable collection of extremely insightful articles on the world s most successful advanced technology agency Drafted by the leading US experts on DARPA it provides a variety of perspectives that in turn benefit from being presented together in a comprehensive volume It reviews DARPA s unique role in the U S innovation system as well as the challenges DARPA and its clones face today As the American model is being considered for adoption by a number of countries worldwide this book makes a welcome and timely contribution to the policy dialogue on the role played by governments in stimulating technological innovation Prof Charles Wessner Georgetown University The U S Defense Advanced Research Projects Agency DARPA has played a remarkable role in the creation new transformative technologies revolutionizing defense with drones and precision guided munitions and transforming civilian life with portable GPS receivers voice recognition software self driving cars unmanned aerial vehicles and most famously the ARPANET and its successor the Internet Other parts of the U S

Government and some foreign governments have tried to apply the DARPA model to help develop valuable new technologies. But how and why has DARPA succeeded? Which features of its operation and environment contribute to this success? And what lessons does its experience offer for other U.S. agencies and other governments that want to develop and demonstrate their own transformative technologies? This book is a remarkable collection of leading academic research on DARPA from a wide range of perspectives combining to chart an important story from the Agency's founding in the wake of Sputnik to the current attempts to adapt it to use by other federal agencies. Informative and insightful, this guide is essential reading for political and policy leaders as well as researchers and students interested in understanding the success of this agency and the lessons it offers to others.

Research Proposals Thomas E. Ogden, Israel A. Goldberg, 1995. This third edition of the classic *How to Write a Research Proposal* incorporates recent changes in policies and procedures of the NIH with particular emphasis on the role of the Internet in the research proposal process. Completely revised and updated, it reveals the secrets of success used by seasoned investigators and directs the reader through the maze of NIH bureaucracies. In addition to providing a detailed overview of the entire review process, the book also includes hundreds of tips on how to enhance proposals, excerpts from real proposals, and extensive Internet references. This book is essential to all scientists involved in the grant writing process.

Key Features: Considers the reviewer's perspective; Detailed presentation of the review process; All sections of the R01 proposal are reviewed; Hundreds of tips to enhance proposals; Includes the many recent changes in NIH policies; Includes many excerpts from real proposals; Provides extensive Internet references.

Benefits: Increased competitiveness; Better priority scores; Less chance of triage; Increased award rates; Uses the system to advantage; Reveals strategies used by the old pros.

A New Vision for Center-Based Engineering Research National Academies of Sciences, Engineering, and Medicine, National Academy of Engineering, Division on Engineering and Physical Sciences, National Materials and Manufacturing Board, Committee on a Vision for the Future of Center-Based Multidisciplinary Engineering Research, 2017-08-18. The future security, economic growth, and competitiveness of the United States depend on its capacity to innovate. Major sources of innovative capacity are the new knowledge and trained students generated by U.S. research universities. However, many of the complex technical and societal problems the United States faces cannot be addressed by the traditional model of individual university research groups headed by a single principal investigator. Instead, they can only be solved if researchers from multiple institutions and with diverse expertise combine their efforts. The National Science Foundation (NSF) among other federal agencies began to explore the potential of such center-scale research programs in the 1970s and 1980s in many ways. The NSF Engineering Research Center (ERC) program is its flagship program in this regard. The ERCs are interdisciplinary, multi-institutional centers that join academia, industry, and government in partnership to produce transformational engineered systems and engineering graduates who are adept at innovation and primed for leadership in the global economy. To ensure that the ERCs continue to be a source of innovation, economic development, and educational

Enhancing the Effectiveness of Team Science National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on the Science of Team Science, 2015-07-15 The past half century has witnessed a dramatic increase in the scale and complexity of scientific research The growing scale of science has been accompanied by a shift toward collaborative research referred to as team science Scientific research is increasingly conducted by small teams and larger groups rather than individual investigators but the challenges of collaboration can slow these teams progress in achieving their scientific goals How does a team based approach work and how can universities and research institutions support teams Enhancing the Effectiveness of Team Science synthesizes and integrates the available research to provide guidance on assembling the science team leadership education and professional development for science teams and groups It also examines institutional and organizational structures and policies to support science teams and identifies areas where further research is needed to help science teams and groups achieve their scientific and translational goals This report offers major public policy recommendations for science research agencies and policymakers as well as recommendations for individual scientists disciplinary associations and research universities Enhancing the Effectiveness of Team Science will be of interest to university research administrators team science leaders science faculty and graduate and postdoctoral students

The Grant Application Writer's Workbook M. S. (Peg) AtKisson, David C. Morrison, Stephen W. Russell, 2012-11-26 **Enhancing the Postdoctoral Experience for Scientists and Engineers** Institute of Medicine, National Academy of Engineering, National Academy of Sciences, Committee on Science, Engineering, and Public Policy, 2000-10-08 The concept of postdoctoral training came to science and engineering about a century ago Since the 1960s the performance of research in the United States has increasingly relied on these recent PhDs who work on a full time but on a temporary basis to gain additional research experience in preparation for a professional research career Such experiences are increasingly seen as central to careers in research but for many the postdoctoral experience falls short of expectations Some postdocs indicate that they have not received the recognition standing or compensation that is commensurate with their experience and skills Is this the case If so how can the postdoctoral experience be enhanced for the over 40 000 individuals who hold these positions at university government and industry laboratories This new book offers its assessment of the postdoctoral experience and provides principles action points and recommendations for enhancing that experience *How to Prepare a Research Proposal* David R. Krathwohl, 1988 The public assumes the researcher spends the day dreaming up and trying out creative ideas In reality proposal development is an invisible but critical barrier over which even a good researcher may tumble This book is intended to lower that barrier It should increase first trial recognition of good ideas and ensure that rejections do not result because a proposal poorly

represented either the ideas the investigator or both Planning, Proposing, and Presenting Science Effectively Jack P. Hailman, Karen B. Strier, 2006-11-02 Publisher description *Inside Graduate Admissions* Julie R. Posselt, 2016-01-11 How does graduate admissions work Who does the system work for and who falls through its cracks More people than ever seek graduate degrees but little has been written about who gets in and why Drawing on firsthand observations of admission committees and interviews with faculty in 10 top ranked doctoral programs in the humanities social sciences and natural sciences education professor Julie Posselt pulls back the curtain on a process usually conducted in secret Politicians judges journalists parents and prospective students subject the admissions policies of undergraduate colleges and professional schools to considerable scrutiny with much public debate over appropriate criteria But the question of who gets into Ph D programs has by comparison escaped much discussion That may change with the publication of *Inside Graduate Admissions* While the departments reviewed in the book remain secret the general process used by elite departments would now appear to be more open as a result of Posselt s book Scott Jaschik *Inside Higher Ed* Revealing Provide s clear consistent insights into what admissions committees look for Beryl Lieff Benderly **Science** **Strengthening the Linkages Between the Sciences and the Mathematical Sciences** National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Committee on Strengthening the Linkages Between the Sciences and the Mathematical Sciences, 2000-04-05 Over three hundred years ago Galileo is reported to have said The laws of nature are written in the language of mathematics Often mathematics and science go hand in hand with one helping develop and improve the other Discoveries in science for example open up new advances in statistics computer science operations research and pure and applied mathematics which in turn enabled new practical technologies and advanced entirely new frontiers of science Despite the interdependency that exists between these two disciplines cooperation and collaboration between mathematical scientists and scientists have only occurred by chance To encourage new collaboration between the mathematical sciences and other fields and to sustain present collaboration the National Research Council NRC formed a committee representing a broad cross section of scientists from academia federal government laboratories and industry The goal of the committee was to examine the mechanisms for strengthening interdisciplinary research between mathematical sciences and the sciences with a strong focus on suggesting the most effective mechanisms of collaboration *Strengthening the Linkages Between the Sciences and the Mathematical Sciences* provides the findings and recommendations of the committee as well as case studies of cross discipline collaboration the workshop agenda and federal agencies that provide funding for such collaboration **Preparing Teachers** National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on the Study of Teacher Preparation Programs in the United States, 2010-07-25 Teachers make a difference The success of any plan for improving educational outcomes depends on the teachers who carry it out and thus on the abilities of those attracted to the field and their preparation Yet there are many questions about how teachers are being

prepared and how they ought to be prepared Yet teacher preparation is often treated as an afterthought in discussions of improving the public education system Preparing Teachers addresses the issue of teacher preparation with specific attention to reading mathematics and science The book evaluates the characteristics of the candidates who enter teacher preparation programs the sorts of instruction and experiences teacher candidates receive in preparation programs and the extent that the required instruction and experiences are consistent with converging scientific evidence Preparing Teachers also identifies a need for a data collection model to provide valid and reliable information about the content knowledge pedagogical competence and effectiveness of graduates from the various kinds of teacher preparation programs Federal and state policy makers need reliable outcomes based information to make sound decisions and teacher educators need to know how best to contribute to the development of effective teachers Clearer understanding of the content and character of effective teacher preparation is critical to improving it and to ensuring that the same critiques and questions are not being repeated 10 years from now

Estimating Causal Effects Barbara Schneider,2007 Explains the value of quasi experimental techniques that can be used to approximate randomized experiments The goal is to describe the logic of causal inference for researchers and policymakers who are not necessarily trained in experimental and quasi experimental designs and statistical techniques

The Complete Writing Guide to NIH Behavioral Science Grants Lawrence M. Scheier,William L. Dewey,2008 The Complete Writing Guide implements the very latest technical information on NIH grants submission covers the most competitive awards and reviews key strategies for writing successful NIH grants in the behavioral sciences The book provides a step by step guide and can help even the most seasoned grant writer achieve a higher level of proficiency writing and submitting federal grants

Having Success with NSF Ping Li,Karen Marrongelle,2012-11-27 This book is designed to help researchers achieve success in funding their National Science Foundation NSF research proposals The book discusses aspects of the proposal submission and review process that are not typically communicated to the research community Written by authors with successful track records in grant writing and years of experience as NSF Program Directors this book provides an insider s view of successful grantsmanship Written in a practical approach this book offers tips that will not be found in official paperwork and provides answers to questions frequently asked of NSF Program Directors The purpose of the book is to improve your NSF grant writing skills and improve your chances of funding
