Using Science to Improve the BLM Wild Horse and Burro Program National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee to Review the Bureau of Land Management Wild Horse and Burro Management Program, 2013-10-04 *Using Science to Improve the BLM Wild Horse and Burro Program A Way Forward* reviews the science that underpins the Bureau of Land Management's oversight of free ranging horses and burros on federal public lands in the western United States concluding that constructive changes could be implemented. The Wild Horse and Burro Program has not used scientifically rigorous methods to estimate the population sizes of horses and burros to model the effects of management actions on the animals or to assess the availability and use of forage on rangelands. Evidence suggests that horse populations are growing by 15 to 20 percent each year a level that is unsustainable for maintaining healthy horse populations as well as healthy ecosystems. Promising fertility control methods are available to help limit this population growth however. In addition, science based methods exist for improving population estimates, predicting the effects of management practices in order to maintain genetically diverse healthy populations and estimating the productivity of rangelands. Greater transparency in how science based methods are used to inform management decisions may help increase public confidence in the Wild Horse and Burro Program.

Firearm Safety Certificate - Manual for California Firearms Dealers and DOJ Certified Instructors California Department of Justice, 2016-12. The growing concern over the number of accidental firearm shootings, especially those involving children, prompted passage of the initial handgun safety law which went into effect in 1994. The stated intent of the California Legislature in enacting the current FSC law is for persons who obtain firearms to have a basic familiarity with those firearms, including but not limited to the safe handling and storage of those firearms. The statutory authority for this program is contained in Penal Code sections 26840 and 31610 through 31700. These statutes mandate DOJ to develop, implement, and maintain the FSC Program. Pursuant to Penal Code section 26840, a firearms dealer cannot deliver a firearm unless the person receiving the firearm presents a valid FSC, which is obtained by passing a written test on firearm safety. Prior to taking delivery of a firearm from a licensed firearms dealer, the purchaser/recipient must also successfully perform a safe handling demonstration with that firearm.

Environment and Sustainable Development M.H. Fulekar, Bhawana Pathak, R K Kale, 2013-10-04. Global society in the 21st century is facing challenges of improving the quality of air, water, soil, and the environment and maintaining the ecological balance. Environmental pollution thus has become a major global concern. The modern growth of industrialization, urbanization, modern agricultural development, and energy generation has resulted in the indiscriminate exploitation of natural resources for fulfilling human desires and needs, which has contributed to disturbing the ecological balance on which the quality of our environment depends. Human beings, in the truest sense, are the product of their environment. The man-environment relationship indicates that pollution and deterioration of the environment have a social origin. The modern technological advancements in chemical processes and operations have generated new products, resulting in new pollutants in such abundant levels that they are above the self-cleaning capacity of the environment. One of the major issues in recent times is the threat to human lives due to the progressive deterioration of the environment from various sources. The impact of the pollutants on the environment will be significant when the accumulated pollutants load will exceed the carrying capacity of the receiving environment. Sustainable development envisages the use of natural resources such as forests, land, water, and fisheries in a sustainable manner without causing changes in our natural world. The Rio de Janeiro Earth Summit, held in Brazil in 1992, focused on sustainable development to encourage respect and concern for the use of natural resources in a sustainable manner for the protection of the environment. This book will be beneficial as a source of educational material to post-graduate research scholars, teachers, and industrial personnel for maintaining the balance in the use of natural sources for sustainable development.

Quantifying Systemic Risk Joseph G. Haubrich,Andrew W. Lo,2013-01-24 In the aftermath of the recent financial crisis the federal government has pursued significant regulatory reforms including proposals to measure and monitor systemic risk However there is much debate about how this might be accomplished quantitatively and objectively or whether this is even possible A key issue is determining the appropriate trade offs between risk and reward from a policy and social welfare perspective given the potential negative impact of crises One of the first books to address the challenges of measuring statistical risk from a system wide perspective Quantifying Systemic Risk looks at the means of measuring systemic risk and explores alternative approaches Among the topics discussed are the challenges of tying regulations to specific quantitative measures the effects of learning and adaptation on the evolution of the market and the distinction between the shocks that start a crisis and the mechanisms that enable it to grow

Introduction to the Theory of Computation Michael Sipser, 2006. Intended as an upper level undergraduate or introductory graduate text in computer science theory, this book lucidly covers the key concepts and theorems of the theory of computation. The final chapter introduces more advanced topics such as the discussion of complexity classes associated with probabilistic algorithms.

Role of Stem Cells in Skeletal Muscle Development, Regeneration, Repair, Aging and Disease Pura Muñoz-Cánoves, Jaime J. Carvajal, Adolfo Lopez de Munain, Ander Izeta, 2016-06-29. Adult stem cells are responsible for tissue regeneration and repair throughout life. Their quiescence or activation are tightly regulated by common signalling pathways that often recapitulate those happening during embryonic development, and thus it is important to understand their regulation not only in postnatal life but also during foetal development. In this regard, skeletal muscle is an interesting tissue since it accounts for a large percentage of body mass (about 40%), it is highly amenable to intervention through exercise, and it is also key in metabolic and physiological changes underlying frailty/susceptibility in the elderly. While muscle resident satellite cells are responsible for all myogenic activity in physiological conditions and become senescent in old age, other progenitor cells such as mesoangioblasts do seem to contribute to muscle regeneration and repair after tissue damage. Similarly, fibro-adipogenic precursor cells seem to be key in the aberrant response that fills up the space left from atrophied muscle mass, and which ends up with a dysfunctional muscle having vast areas of fatty infiltration and fibrosis. The complex interplay between these stem/progenitor cell types and their niches in normal and pathological conditions throughout life are the subjects of intense investigation. This eBook highlights recent developments on the role of stem cells in skeletal muscle function both in prenatal and postnatal life and their regulation by transcriptional, post-transcriptional, and epigenetic mechanisms. Additionally, it includes articles on interventions associated with exercise, pathological changes in neuromuscular diseases, and stem cell aging.
