The text has been extensively revised, particularly the chapters on embryology, the abdomen, the pelvis and the nervous system; more scans and radiographs have been added, along with around 70 new diagrams; and new points of clinical and surgical relevance have been added throughout. This laboratory manual presents the structure of the human body by subdividing it into individual body systems,

guiding students through a series of dissection activities for use in the lab accompanied by full color photos and figures. The functional anatomy of each level of organization is studied from the microscopic level of organization to the gross (macroscopic) level. In addition, the embryological development of each body system and selected pathologies are examined. This manual studies anatomy of the human specimen in particular, but the cat and isolated animal organs are used in the dissection experiments. For one-semester courses in human anatomy.
