Improving Breast Imaging Quality Standards National Research Council, Institute of Medicine, National Cancer Policy Board, Committee on Improving Mammography Quality Standards, 2005-09-27 Mammography is an important tool for detecting breast cancer at an early stage. When coupled with appropriate treatment, early detection can reduce breast cancer mortality. At the request of Congress, the Food and Drug Administration (FDA) commissioned a study to examine the current practice of mammography and breast cancer detection with a focus on the FDA's oversight via the Mammography Quality Standards Act (MQSA) to identify areas in need of improvement. Enacted in 1993, MQSA provides a general framework for ensuring national quality standards in facilities performing screening mammography; it requires that each mammography facility be accredited and certified and mandates that facilities will undergo annual inspections. This book recommends strategies for achieving continued progress in assuring mammography quality, including changes to MQSA regulation as well as approaches that do not fall within the purview of MQSA. Specifically, this book provides recommendations aimed at improving mammography interpretation, revising MQSA regulations, inspections, and enforcement, ensuring an adequate workforce for breast cancer screening and diagnosis, and improving breast imaging quality beyond mammography.

The Mehweb language Michael Daniel, Nina Dobrushina, Dmitry Ganenkov, 2019-10-23 This book is an investigation into the grammar of Mehweb, a Dargwa East Caucasian language also known as Nakh Daghestanian, based on several years of team fieldwork. Mehweb is spoken in one village community in Daghestan, Russia, with a population of some 800 people. In many ways, Mehweb is a typical East Caucasian language: it has a rich inventory of consonants, an extensive system of spatial forms in nouns and converbs, and volitional forms in verbs, pervasive gender-number agreement and ergative alignment in case marking, and in gender agreement. It is also a typical language of the Dargwa branch, with symmetrical verb inflection in the imperfective and perfective paradigm and extensive use of spatial encoding for experiencers. Although Mehweb is clearly close to the northern varieties of Dargwa, it has been long isolated from the main body of Dargwa varieties by speakers of Avar and Lak. As a result of both independent internal evolution and contact with its neighbours, Mehweb developed some deviant properties, including accusatively aligned egophoric agreement, a split in the feminine class, and the typologically rare grammatical categories of verificative and apprehensive. But most importantly, Mehweb is where our friends live.
