The SPARC Architecture Manual SPARC International, 1994. SPARC Scalable Processor Architecture is the industry's only openly defined and evolved RISC architecture. Version 9 is the new 64 bit incarnation of SPARC, the most significant change since SPARC's introduction in 1987. Unlike other RISC Reduced Instruction Set Computer designs, SPARC specifies not a hardware implementation chip but an open standard architecture belonging to the community of SPARC vendors and users. The SPARC specification is defined by the SPARC Architecture Committee, a technical arm of the computer maker consortium SPARC International. Version 9 provides 64 bit data and addressing support, fault tolerance, fast context switching support for advanced compiler optimizations, efficient design for Superscalar processors, and a clean structure for modern operating systems. The V9 architecture supplements rather than replaces the 32 bit Version 8 architecture. The non-privileged features of Version 9 are upward compatible from Version 8, so 32 bit application software can execute natively without modification on Version 9 systems; no special compatibility mode is required. Publication of the Version 9 architecture marks a three year development effort by SPARC International member companies from a broad cross section of disciplines.

HVAC - Variable Refrigerant Flow (VRF) Systems A. Bhatia, 2014-12-06. VRF Variable refrigerant flow is an air condition system configuration where there is one outdoor condensing unit and multiple indoor units. The term variable refrigerant flow (VRF) refers to the ability of the system to control the amount of refrigerant flowing to the multiple evaporators indoor units, enabling the use of many evaporators of differing

capacities and configurations connected to single condensing unit The arrangement provides an individualized comfort control and simultaneous heating and cooling in different zones Currently widely applied in large buildings especially in Japan and Europe these systems are just starting to be introduced in the U S The VRF technology system was developed and designed by Daikin Industries Japan who named and protected the term variable refrigerant volume VRV system so other manufacturers use the term VRF variable refrigerant flow In essence both are same With a higher efficiency and increased controllability the VRF system can help achieve a sustainable design Unfortunately the design of VRF systems is more complicated and requires additional work compared to designing a conventional direct expansion DX system This 3 hour quick book provides an overview of VRF system technology Emphasis is placed on the control principles terminology basic components advantages and design limitations This course is aimed at the personnel who have some limited background in the air conditioning field and is suitable for mechanical electrical controls and HVAC engineers architects building designers contractors estimators energy auditors and facility managers The course includes a multiple choice quiz consisting of fifteen 15 questions at the end Learning Objective At the conclusion of this course the reader will Understand the difference between multi split air conditioning system and VRF systems Understand the operating principle of direct expansion split and VRF system Understand the concept of thermal zone Understand how VRF with heat recovery are different from ordinary heat pump systems Understand the operation of thermostatic expansion valve TXV and electronic expansion valve EEV Understand the influence of building characteristics and load profile on selection of VRF system Learn the advantages and application of VRF systems Understand the design limitations and challenges in design of VRF systems
