«Бизнес-журнал» (www.b-mag.ru) - самое массовое всероссийское деловое издание, адресованное предпринимателям, управляющим собственникам и топ-менеджерам компаний. Выходит ежемесячно в более чем 20 регионах России общим тиражом около 100 тысяч экземпляров. Журнал является открытой площадкой для обмена предпринимательским опытом, для распространения информации о лучших деловых практиках и популяризации современных управленческих, финансовых и маркетинговых инструментов. Основное внимание редакция уделяет публикациям, затрагивающим практические аспекты ведения бизнеса в России. Unix Is One Big

Ocean. A World Without End. There Are Several Books Which Help You Explore The Shores As Well As The High Seas. But As You Go On Learning Unix Somewhere You Would Like To Stop And Take Stock Of The Situation, Figure Out How Much Of It Do You Really Now. That'S The Time You Would Find This Book Handy. It'S A Book Of Questions. Questions Which Are One Liners, Or The Multiple Choice Questions, Or Full Fledged Shell Programs. And At The End Of Each Chapter You Would Find Answers To These Questions, Which Would Fill In The Gaps Of Unix Knowledge That You Have Grasped So Far. Salient Features, Lots Of Questions Which Will Test Your Strengths In Unix. Questions Segregated Topic-Wise Such That You Can Test Your Skills On Particular Topics. Lucid Explanations On Widely Misunderstood Topics Like Getopts, Eval, Trap, Functions Etc. So Roll Up Your Sleeves And Get On With The Real Questions. Good Luck! This book constitutes the refereed proceedings of the 5th International Conference on Trust and Trustworthy Computing, TRUST 2012, held in Vienna, Austria, in June 2012. The 19 revised full papers presented were carefully reviewed and selected from 48 submissions. The papers are organized in two tracks: a technical track with topics ranging from trusted computing and mobile devices to applied cryptography and physically unclonable functions, and a socio-economic track focusing on the emerging field of usable security. Proceedings of the world renowned ERCOFTAC (International Symposium on Engineering Turbulence Modelling and Measurements). The proceedings include papers dealing with the following areas of turbulence: · Eddy-viscosity and second-order RANS models · Direct and large-eddy simulations and deductions for conventional modelling · Measurement and visualization techniques, experimental studies · Turbulence control · Transition and effects of curvature, rotation and buoyancy on turbulence · Aero-acoustics · Heat

and mass transfer and chemically reacting flows · Compressible flows, shock phenomena · Two-phase flows · Applications in aerospace engineering, turbomachinery and reciprocating engines, industrial aerodynamics and wind engineering, and selected chemical engineering problems Turbulence remains one of the key issues in tackling engineering flow problems. These problems are solved more and more by CFD analysis, the reliability of which depends strongly on the performance of the turbulence models employed. Successful simulation of turbulence requires the understanding of the complex physical phenomena involved and suitable models for describing the turbulent momentum, heat and mass transfer. For the understanding of turbulence phenomena, experiments are indispensable, but they are equally important for providing data for the development and testing of turbulence models and hence for CFD software validation. As in other fields of Science, in the rapidly developing discipline of turbulence, swift progress can be achieved only by keeping up to date with recent advances all over the world and by exchanging ideas with colleagues active in related fields. This book constitutes the refereed proceedings of the 9th International Workshop on Economics of Grids, Clouds, Systems, and Services, GECON 2012, held in Berlin, Germany, in November 2012. The 12 revised full papers presented together with 6 work in progress papers were carefully reviewed and selected from more than 36 submissions. The papers are organized in the following topical sections: market mechanisms, pricing and negotiation; resource allocation, scheduling and admission control; work in progress on tools and techniques for cost-efficient service selection; market modeling; trust; cloud computing in education; and work in progress on cloud adoption and business models. Major scholarship deadlines; financial aid deadlines; housing deadlines; ROTC and service Academy deadlines; SAT and ACT deadlines, completely hands-on and chronologically arranged over the course of 16 months, the Fiske College Deadline Planner has the information every student needs. A journalist in nineteenth-century New York matches wits with a serial killer in a gripping thriller by the prizewinning author of the Ian Hamilton

Mysteries. New York, 1880. Elizabeth van den Broek is the only female reporter at the Herald, the city's most popular newspaper. Then she and her bohemian friend Carlotta Ackerman find a woman's body wrapped like a mummy in a freshly dug hole in Central Park--the intended site of an obelisk called Cleopatra's Needle. The macabre discovery takes Elizabeth away from the society pages to follow an investigation into New York City's darkest shadows. When more bodies turn up, each tied to Egyptian lore, Elizabeth is onto a headline-making scoop more sinister than she could have imagined. Her reporting has readers spellbound, and each new clue implicates New York's richest and most powerful citizens. And a serial killer is watching every headline. Now a madman with an indecipherable motive is coming after Elizabeth and everyone she loves. She wants a good story? She may have to die to get it. This book constitutes the refereed proceedings of the 5th International Conference on Trust and Trustworthy Computing, TRUST 2012, held in Vienna, Austria, in June 2012. The 19 revised full papers presented were carefully reviewed and selected from 48 submissions. The papers are organized in two tracks: a technical track with topics ranging from trusted computing and mobile devices to applied cryptography and physically unclonable functions, and a socio-economic track focusing on the emerging field of usable security. More information to be announced soon on this forthcoming title from Penguin USA Essential record book for your estate and housing customers. Real estate business Management guide book. Product Details: Personal Details Page on the First Page 110 pages for proper record of all client details interior details: Customer Details, Deposit, Property Requirements, Location Preferences, Suitable Properties (Addresses), Viewing Dates, Sale details, Notes etc. Real Estate Agents and broker practical work book Large Sized 8.5"x11" (21.59cm x 27.94cm) Acid free with thick White paper to reduce the bleed through of ink Ideal client management book for realtors For more related products like Business goals planner, To Do List Journals and everyday essentials logbooks or Planners in Different Sizes Options and Varied Cover, please take a look at our amazon author page. From the craftsman behind

the popular YouTube channel Primitive Technology comes a practical guide to building huts and tools using only natural materials from the wild. John Plant, the man behind the channel, Primitive Technology, is a bonafide YouTube star. With almost 10 million subscribers and an average of 5 million views per video, John's channel is beloved by a wide-ranging fan base, from campers and preppers to hipster woodworkers and craftsmen. Now for the first time, fans will get a detailed, behind-the-scenes look into John's process. Featuring 50 projects with step-by-step instructions on how to make tools, weapons, shelters, pottery, clothing, and more, Primitive Technology is the ultimate guide to the craft. Each project is accompanied by illustrations as well as mini-sidebars with the history behind each item, plus helpful tips for building, material sourcing, and so forth. Whether you're a wilderness aficionado or just eager to spend more time outdoors, Primitive Technology has something for everyone's inner nature lover. This book is the richest, most comprehensive guided reading resource available today and the first systematic offering of instructional support for guided reading adherents. This text is an ideal introductory for 1st year mechanical engineering students. Written in competency-based terms, the text focuses on two national modules; Thermodynamics 1 (EA714) and Fluid Mechanics 1 (EA70 6). Each chapter reflects the learning outcomes for the modules. Special Price \$57.00 (Textbook Promo) until 31/05/05. California Treasures is a research-based reading and language arts program for Grades K-6 that: builds a lifelong love of reading through explicit systematic instruction coupled with time-honored classics, contemporary nonfiction, and rich literature; addresses the four key aspects of language arts every day: listening, speaking, reading, and writing; integrates print resources with digital resources providing teachers with options for teaching styles; offers an equitable parallel Spanish program, California Tesoros de lectura; follows California's revised English language development standards by incorporating the required English language support into the program and providing a complete English language development component to assist students transitioning into

English. This book gives recommendations on which interactive decision aids to offer in webstores. Interactive decision aids are tools that help online shoppers to compare and evaluate product information. Consumers can, for instance, exclude products that do not meet certain criteria, they can highlight certain information or they can assign ratings of different kinds. Interactive decision aids are important, because finding the preferred product in a short amount of time increases both the customers' satisfaction and, in turn, the sales volume. This book includes a detailed description of decision aids, closely studies how decision aids are related to the decision behavior of customers, and develops a comprehensive system of decision aids, which is very flexible, increases both customer satisfaction and confidence, and can be used intuitively. The close link between typical behaviors and the decision aids allows webstores to learn about customers' decision-making behavior by using a simple click stream analysis. The book is written in an easy-to-read style and provides both practical recommendations and knowledge about consumer behavior. This book constitutes the refereed proceedings of the 12th International Symposium on Privacy Enhancing Technologies, PET 2012, held in Vigo, Spain, in July 2012. The 16 full papers presented were carefully selected from 72 submissions. Topics addressed include anonymization of statistics, content, and traffic, network traffic analysis, censorship-resistant systems, user profiling, training users in privacy risk management, and privacy of internet and cloud-based services. A further highlight is the HotPETS session, designed as a venue to present existing but still preliminary and evolving ideas. This book examines the first thirty years of Elizabeth I's reign from the perspective of the Valois kings, Charles IX and Henri III of France. Estelle Paranque sifts through hundreds of French letters and ambassadorial reports to construct a fuller picture of early modern Anglo-French relations, highlighting key events such as the St. Bartholomew's Day Massacre, the imprisonment and execution of Mary, Queen of Scots, and the victory of England over the Spanish Armada in 1588. By drawing on a wealth of French sources, she illuminates the French royal family's shifting

perceptions of Elizabeth I and suggests new conclusions about her reign. A heart rending love affair of a girl and a boy who meet as classmates, friends and later as the most purely loved humans on earth. The comrade boy realizes his destiny of life. The bond of god can't be torn by humans.... This is not a book about algorithms. This is not a book about architecture. This is not a book about frameworks. This is not even a book about project management, agile or otherwise. This is a book about "the other things" that are important to writing and maintaining a sustainable code base. It's also a book about automation of parts of the programming process. If you're a CTO, the economic case for "code quality plus automation" is already strong, and getting stronger with each new iteration of hardware. If you're a programmer (maybe aspiring to be a CTO), it's about being able to concentrate on the stimulating, interesting, and creative parts of the craft, and getting the tedious parts done for you. Much of the book is about the general craft of programming and helping programmers become more productive, and should be useful no matter what programming language(s) you've chosen. However, I find it works better to illustrate principles with examples. And this edition of the book picks examples from the PHP programming language. "The field of auditory processing disorders is filled with many publications which may be confusing to someone trying to learn about this topic. The typical approach to auditory processing taken by authors is either viewing such processes as involving only the auditory system, or not differentiating between auditory processes and other processes such as sensory processing, language understanding, or cognitive/thinking factors. Understanding Auditory Processing Disorders by Dr. Jay R. Lucker presents a comprehensive, integrated approach identifying how auditory processing involves many systems- not merely the auditory system- and describing how different types of auditory processes involve specific systems. Understanding this multisystem approach to auditory processing helps to identify what is going on with children who have problems processing what they hear when hearing loss is not the primary contributing factor. For parents of children who

may have auditory processing problems, this book helps them to better understand what going on with their children and how to modify listening tasks for their children. For educators, this book helps them better understand how auditory processing disorders can affect a child educationally, as well as provides recommendations for accommodations that teachers and other professionals can use to make understanding what is spoken in class lessons, conversations, and verbal interactions with adults and children easier. This book clarifies what is needed for the appropriate evaluation of auditory processing to better understand what systems may be malfunctioning and affecting children's abilities to appropriately process and understand what they hear. For speech-language pathologists and occupational therapists who may provide treatment for children with auditory processing disorder problems, this book identifies some specific treatments that have evidence-based research associated with improving different factors that contribute to auditory processing disorders. For audiologists, this book provides a better understanding of how the testing of auditory processing can be more successful in identifying what appropriate accommodations and treatments are needed based on the specific type of auditory processing disorder the child has"-- Divided into four parts: circuits, electronics, digital systems, and electromagnetics, this text provides an understanding of the fundamental principles on which modern electrical engineering is based. It is suitable for a variety of electrical engineering courses, and can also be used as a text for an introduction to electrical engineering. Paloma, a white dove, invites children to fly with her through her high-rise apartment as she describes her daily life as a domestic pet with her owner. She contrasts it with the life of wild birds who face many dangers like flying into glass windows and doors and escaping from predators. Words on one side of each page are complemented by photographs on the other in A5 format. Written by Barbara Booth, ex Primary School Teacher-Librarian and Journalist, the production of the book is by Flametree Creative Graphic Designers in Cottesloe, Western Australia. My Name is Paloma can already be

The Canadian Labour Movement is a fascinating story that brings to life the working men and women who built Canada's unions. This concise history recounts the story of Canadian labour from the nineteenth century to the present day. First published in 1989, it has been updated to include new developments in the world of labour up to 1995. Heron depicts the major events and trends in labour's history, and assesses the current state and direction of the labour movement. The Canadian Labour Movement is a masterful overview of the subject, providing a broad and accessible introduction to Canadian labour. Need help with tracking your monthly expenses or to keep your budget in order? We'd like to help make it easier for you. This two column ledger will help you work more efficiently, smarter and better at the office, home or school. A simple tool to keep accurate bookkeeping records. Whether you run a farm, a corporate professional, head of a busy household, a business traveler or a student, this is the perfect ledger for you! This proceeding includes original and peer-reviewed research papers from the 3rd International Conference on Control, Instrumentation and Mechatronics Engineering (CIM2022). The conference is a virtual conference held on 2-3 March 2022. The topics covered latest work and finding in the area of Control Engineering, Mechatronics, Robotics and Automation, Artificial Intelligence, Manufacturing, Sensor, Measurement and Instrumentation. Moreover, the latest applications of instrumentations, control and mechatronics are provided. Therefore, this

proceeding is a valuable material for researchers, academicians, university students and engineers. Piano Lessons Made Easy feature popular tunes and captivating illustrations to stimulate the child's musical interest and imagination. This is the second book of three in this series.
