suffer from far greater disparities in health than others Those disparities are caused not only by fundamental differences in health status across segments of the population but also because of inequities in factors that impact health status so called determinants of health Only part of an individual s health status depends on his or her behavior and choice community wide problems like poverty unemployment poor education inadequate housing poor public transportation interpersonal violence and decaying neighborhoods also contribute to health inequities as well as the historic and ongoing interplay of structures policies and norms that shape lives When these factors are not optimal in a community it does not mean they are intractable such inequities can be mitigated by social policies that can shape health in powerful ways Communities in Action Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States This report focuses on what communities can do to promote health equity what actions are needed by the many and varied stakeholders that are part of communities or support them as well as the root causes and structural barriers that need to be overcome Good Health and Well-Being Walter Leal Filho, Tony Wall, Anabela Marisa Azul, Luciana Brandli, Pinar Gökcin Özuyar, 2019-10-26

Health Care Financing and Affordability in the Emerging Global Markets Mihajlo (Michael) Jakovljevic, Kyriakos Souliotis, Wim Groot, 2016-04-14 During the recent few decades global economic growth has been driven largely by developing world economies The ones with the most intensive pace of development were marked as emerging

markets led by so called BRICS and N 11 countries Such changes inevitably reflected the global health arena A number of issues previously limited to established high income economies became popularly discussed topics on the agendas of public health policy makers across these regions Major challenges remain population aging rising incidence of prosperity diseases lack of universal insurance coverage and particularly provision of just and equitable access to medical care among the poor both in urban and rural communities A significant part of the difficulties faced by these societies are attributed to inefficient resource allocation strategies in health care and unsatisfactory funding strategies This Research Topic was created in order to address the core challenges of medical care financing and its affordability across the emerging global markets

Contributions of both undergoing or finished original research as well as review style papers are welcomed All submitted manuscripts should deal with issues relevant to health care economics and policy in recognized global emerging markets Outside the aforementioned key markets BRICS Brazil Russia India China South Africa Next 11 Bangladesh Egypt Indonesia Iran South Korea Mexico Nigeria Pakistan the Philippines Turkey and Vietnam submissions referring to any of the dynamically developing Asian Latin America Eastern Europe or MENA countries are encouraged In addition to a variety of health economic evaluations and health policy analysis methodological and resource use studies are within the Topic scope Health policy considerations should be primarily focused on financing mechanisms and affordability of health care although other surrounding issues such as health insurance reimbursement and cost containment strategies will be considered

The Health Effects of Cannabis and Cannabinoids National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on the Health Effects of Marijuana: An Evidence Review and Research Agenda, 2017-03-31 Significant changes have taken place in the policy landscape surrounding cannabis legalization production and use During the past 20 years 25 states and the District of Columbia have legalized cannabis and or cannabidiol a component of cannabis for medical conditions or retail sales at the state level and 4 states have legalized both the medical and recreational use of cannabis These landmark changes in policy have impacted cannabis use patterns and perceived levels of risk However despite this changing landscape evidence regarding the short and long term health effects of cannabis use remains elusive While a myriad of studies have examined cannabis use in all its various forms often these research conclusions are not appropriately synthesized translated for or communicated to policy makers health care providers state health officials or other stakeholders who have been charged with influencing and enacting policies procedures and laws related to cannabis use Unlike other controlled substances such as alcohol or tobacco no accepted standards for safe use or appropriate dose are available to help guide individuals as they make choices regarding the issues of if when where and how to use cannabis safely and in regard to therapeutic uses effectively Shifting public sentiment conflicting and impeded scientific research and legislative battles have fueled the debate about what if any harms or benefits can be attributed to the use of cannabis or its derivatives and this lack of aggregated knowledge has broad

public health implications The Health Effects of Cannabis and Cannabinoids provides a comprehensive review of scientific evidence related to the health effects and potential therapeutic benefits of cannabis This report provides a research agenda outlining gaps in current knowledge and opportunities for providing additional insight into these issues that summarizes and prioritizes pressing research needs

Research on Women's Health, 1997 **Statistical Topics in Health Economics and Outcomes Research** Demissie Alemayehu, PhD, Joseph C. Cappelleri, PhD, Birol Emir, PhD, Kelly H. Zou, PhD, Pstat, 2017-11-22

With ever rising healthcare costs evidence generation through Health Economics and Outcomes Research HEOR plays an increasingly important role in decision making about the allocation of resources Accordingly it is now customary for health technology assessment and reimbursement agencies to request for HEOR evidence in addition to data from clinical trials to inform decisions about patient access to new treatment options While there is a great deal of literature on HEOR there is a need for a volume that presents a coherent and unified review of the major issues that arise in application especially from a statistical perspective Statistical Topics in Health Economics and Outcomes Research fulfills that need by presenting an overview of the key analytical issues and best practice Special attention is paid to key assumptions and other salient features of statistical methods customarily used in the area and appropriate and relatively comprehensive references are made to emerging trends The content of the book is purposefully designed to be accessible to readers with basic quantitative backgrounds while providing an in depth coverage of relatively complex statistical issues The book will make a very useful reference for researchers in the pharmaceutical industry academia and research institutions involved with HEOR studies The targeted readers may include statisticians data scientists epidemiologists outcomes researchers health economists and healthcare policy and decision makers
