in the office because they simply don't know what to say. Thankfully Green does and in this incredibly helpful book she tackles the tough discussions you may need to have during your career. You'll learn what to say when coworkers push their work on you, then take credit for it, you accidentally trash talk someone in an email, then hit reply all, you're being micromanaged or not being managed at all, you catch a colleague in a lie, your boss seems unhappy with your work, your cubemate's loud speakerphone is making you homicidal, you got drunk at the holiday party. Praise for Ask a Manager: A must read for anyone who works. Alison Green's advice boils down to the idea that you should be professional even when others are not and that communicating in a straightforward manner with candor and kindness will get you far, no matter where you work. Booklist starred review: The author's friendly, warm, no-nonsense writing is a pleasure to read and her advice can be widely applied to relationships in all areas of readers' lives. Ideal for anyone new to the job market or new to management or anyone hoping to improve their work experience. Library Journal starred review: I am a huge fan of Alison Green's Ask a Manager column. This book is even better. It teaches us how to deal with many of the most vexing big and little problems in our workplaces and to do so with grace, confidence, and a sense of humor. Robert Sutton, Stanford professor and author of The No Asshole Rule and The Asshole Survival Guide. Ask a Manager is the ultimate playbook for navigating the traditional workforce in a diplomatic but firm way. Erin Lowry, author of Broke Millennial, Stop Scraping By, and Get Your Financial Life Together.

Interpretable Machine Learning, Christoph Molnar, 2020. This book is about making machine learning models and their decisions interpretable. After exploring the concepts of interpretability, you will learn about simple interpretable models such as decision trees, decision rules, and linear regression. Later chapters focus on general model-agnostic methods for interpreting black box models like feature importance and accumulated local effects and explaining individual predictions with Shapley values and LIME. All interpretation methods are explained in depth and discussed critically: How do they work under the hood? What are their strengths and weaknesses? How can their outputs be interpreted? This book will enable you to select and correctly apply the interpretation method that is most suitable for your machine learning project.
