

Problem #2: It takes 180 mL of 1.2 M HCl to neutralize a 0.75 M solution of NaOH. How much NaOH did I start with?

$$V_a = 180 \text{ mL}$$

$$M_a = 1.2 \text{ M}$$

$$V_b = ?$$

$$M_b = 0.75$$

$$V_a \times M_a = V_b \times M_b$$

$$180 \text{ mL} \times 1.2 \text{ M} = V_b \times 0.75 \text{ M}$$

$$216 = V_b \times 0.75 \text{ M}$$

$$\frac{216}{0.75 \text{ M}} = \frac{V_b \times 0.75 \text{ M}}{0.75 \text{ M}}$$

$$288 \text{ mL}$$

Karl Fischer Titration Eugen Scholz, 2012-12-06 The Karl Fischer titration is used in many different ways following its publication in 1935 and further applications are continually being explored At the present time we are experiencing another phase of expansion as shown by the development of new titration equipment and new reagents KF equipment increasingly incorporates microprocessors which enable the course of a titration to be programmed thus simplifying the titration Coulometric titrators allow water determinations in the micro gram range the KF titration has become a micro method The new pyridine free reagents make its application significantly more pleasant and open up further possibilities on account of their accuracy To make the approach to Karl Fischer titrations easier we have summarized the present knowledge in this monograph and we have complemented it with our own studies and practical experience As this book should remain readable we have tried to keep the fundamentals to a minimum Historical developments are only mentioned if they seem to be necessary for understanding the KF reaction The applications are described more fully Specific details which may interest a particular reader can be found in the original publications cited The referenced literature is in chronological order as the year of publication may also prove informative Thus 6902 for example denotes 69 for 1969 being the year of publication and 02 is a non recurring progressive number The referenced literature includes summaries which we hope will be of help to find the right publication easily
