Burk,C.L. Drake,2013-12-20 The continental margins of the world constitute the most impressive and largest physiographic feature of the earth s surface and one of fundamentally great geological significance Continental margins have been the subject of increasing attention in recent years an interest focused by a body of new data that has provided new insights into their character This interest was further stimulated by the realization that in addition to the abundant living resources continental margins contain petroleum and mineral resources that are accessible with existing technology This realization along with their basic geological importance has provoked further research into the nature of continental margins throughout the world A summary of these findings as related to both recent and ancient continental margins is the subject of this book At various times in the past we had been approached individually to prepare a basic reference to continental margins we then proposed to do such a volume jointly However the stimulus for the present volume eventually arose from a Penrose Conference arranged through the Geological Society of America This conference was attended by specialists of numerous disciplines and from throughout the world many of whom insisted that such a volume would be both timely and useful Consequently we agreed to undertake the task of assembling this book with the objectives of making it available as soon and as inexpensively as possible The Indian Paleogene Sunil Bajpai,Satish C. Tripathi,Vandana Prasad,2018-04-24 This unique book provides a concise account of Indian Paleogene and presents a unified view of the Paleogene sequences of India The Paleogene comprising the early part of the Cenozoic Era was the most dynamic period in the Earth s history with profound changes in the biosphere and geosphere The period spans 42 million years

beginning from post K T mass extinction event at 65 Ma and ending at 23 Ma when the first Antarctic ice sheet appeared in the Southern Hemisphere The early Paleogene Paleocene Eocene has been considered a globally warm period superimposed on which were several transient hyperthermal events of extreme warmth Of these the Palaeocene Eocene Thermal Maxima PETM boundary interval is the most prominent extreme warming episode lasting 200 Ka PETM is characterized by 2.6 global negative carbon isotope excursion The event coincided with the Benthic Extinction Event BEE in deep sea and Larger Foraminifera Turnover LFT in shallow seas Rapid 60-80 warming of high latitudinal regions led to major faunal and floral turnovers in continental shallow marine and deep marine areas The emergence and dispersal of mammals with modern characteristics including Artiodactyls Perissodactyls and Primates APP and the evolution and expansion of tropical vegetation are some of the significant features of the Paleogene warm world In the Indian subcontinent the beginning and end of the Paleogene was marked by various events that shaped the various physiographic features of the Indian subcontinent The subcontinent lay within the equatorial zone during the earliest part of the Paleogene Carbonaceous shale coal and lignite deposits of early Eocene age 55.5-52 Ma on the western and north eastern margins of the Indian subcontinent are rich in fossils and provide information on climate as well as the evolution and paleobiogeography of tropical biota Indian Paleogene deposits in the India Asia collision zone also provide information pertaining to the paleogeography and timing of collision Indian Paleogene rocks are exposed in the Himalayan and Arakan mountains Assam and the shelf basins of Kutch Saurashtra Western Rajasthan Tiruchirappalli Pondicherry and Andaman and though aurally limited these rocks bear geological evidence of immense importance **Himalayan Geology**, 1971
