*Design Science Methodology for Information Systems and Software Engineering* Roel J. Wieringa, 2014-11-19 This book provides guidelines for practicing design science in the fields of information systems and software engineering research A design process usually iterates over two activities first designing an artifact that improves something for stakeholders and subsequently empirically investigating the performance of that artifact in its context This validation in context is a key feature of the book since an artifact is designed for a context it should also be validated in this context The book is divided into five parts Part I discusses the fundamental nature of design science and its

artifacts as well as related design research questions and goals Part II deals with the design cycle i e the creation design and validation of artifacts based on requirements and stakeholder goals To elaborate this further Part III presents the role of conceptual frameworks and theories in design science Part IV continues with the empirical cycle to investigate artifacts in context and presents the different elements of research problem analysis research setup and data analysis Finally Part V deals with the practical application of the empirical cycle by presenting in detail various research methods including observational case studies case based and sample based experiments and technical action research These main sections are complemented by two generic checklists one for the design cycle and one for the empirical cycle The book is written for students as well as academic and industrial researchers in software engineering or information systems It provides guidelines on how to effectively structure research goals how to analyze research problems concerning design goals and knowledge questions how to validate artifact designs and how to empirically investigate artifacts in context and finally how to present the results of the design cycle as a whole

[Comprehensive Energy Management - Safe Adaptation, Predictive Control and Thermal Management](#) Daniel Watzenig, Bernhard Brandstätter, 2017-06-13 The book discusses the emerging topic of comprehensive energy management in electric vehicles from the viewpoint of academia and from the industrial perspective It provides a seamless coverage of all relevant systems and control algorithms for comprehensive energy management their integration on a multi core system and their reliability assurance validation and test Relevant European projects contributing to the evolvment of comprehensive energy management in fully electric vehicles are also included This volume includes contributions on model based functional safety and fault tolerant E E architectures advanced control making use of external information from a cloud as well and thermal management as a central part for energy optimization and finally some aspects on fuel cells The second volume ISBN includes chapters on ECO driving and ECO routing covering different approaches for optimal speed profiles for a given route mostly interconnecting with cloud data

*Coordination in Large-Scale Agile Software Development* Alexander Scheerer, 2017-05-05 This book explores coordination within and between teams in the context of large scale agile software development providing readers a deeper understanding of how coordinated action between teams is achieved in multiteam systems An exploratory multiple case study with five multiteam systems and a total of 66 interviewees from development teams at SAP SE is presented and analyzed In addition the book explores stereotypes of coordination in large scale agile settings and shares new perspectives on integrating conditions for coordination No previous study has researched this topic with a similar data set consisting of insights from professional software development teams As such the book will be of interest to all researchers and practitioners whose work involves software product development across several teams
