Kaslow M.D., Janet McNicholl M.D., Adrian V. S. Hill, 2008-03-03 Infectious diseases are commonly regarded as a distinct category with different causes and patterns than chronic or genetic disease But in fact there are many varieties of genetic susceptibility to infection the subject of this book which will be divided into three sections 1 concepts and methods 2 genes and pathophysiologic mechanisms and 3 infectious agents and diseases No currently published text on either genetics or infectious diseases focuses on the genetic aspects of the special relationship between host and pathogen in the way envisioned for Section 1 No other work on the selected genes regulating immunity deals as systematically with the sequence variation function relationships most pertinent to infection as planned for Section 2 And no other book gives as meaningful a picture of how these genes operate in infectious disease as Section 3 will Segregation's Science Gregory Michael Dorr, 2008-11-29 Blending social intellectual legal medical gender and cultural history Segregation's Science Eugenics and Society in Virginia examines how eugenic theory and practice bolstered Virginia's various cultures of segregation rich from poor sick from well able from disabled male from female and black from white and Native American Famously articulated by

Thomas Jefferson ideas about biological inequalities among groups evolved throughout the nineteenth century. By the early twentieth century proponents of eugenics, the science of racial improvement, melded evolutionary biology and incipient genetics with long-standing cultural racism. The resulting theories taught to generations of Virginia high school, college, and medical students became social policy as Virginia legislators passed eugenic marriage and sterilization statutes. The enforcement of these laws victimized men and women labeled feeble-minded African Americans and Native Americans for over forty years. However, this is much more than the story of majority agents dominating minority subjects. Although white elites were the first to champion eugenics, by the 1910s African American Virginians were advancing their own hereditarian ideas, creating an effective counter narrative to white scientific racism. Ultimately, segregation's science contained the seeds of biological determinism's undoing, realized through the civil women's, Native American, and welfare rights movements. Of interest to historians, educators, biologists, physicians, and social workers, this study reminds readers that science is socially constructed. The syllogism: Science is objective; objective things are moral; therefore, science is moral, remains as potentially dangerous and misleading today as it was in the past.

The State of Food Insecurity in the World 2015 World Food Programme, International Fund for Agricultural Development, Food and Agriculture Organization of the United Nations, 2015-05-27. This year's annual State of Food Insecurity in the World report takes stock of progress made towards achieving the internationally established Millennium Development Goal MDG1 and World Food Summit hunger targets and reflects on what needs to be done as we transition to the new post-2015 Sustainable Development Agenda. The report reviews progress made since 1990 for every country and region as well as for the world as a whole. The 2015 report not only estimates the progress already achieved but also identifies remaining problems and provides guidance on which policies should be emphasized in the future. Key factors that have determined success to date towards food security and nutrition goals are identified. The list of factors—economic growth, agricultural productivity growth, markets, including international trade, and social protection—is by no means exhaustive. The report also shows that protracted crises due to conflict or natural disasters have deleterious effects on progress in hunger reduction.
