human curiosity quite so much as contemplating human origins More than any other branch of science evolution and human evolution in particular is fraught with controversy Working from what is essentially the same data schools of opinion have come to diametrically opposed conclusions Are we adapted Neanderthals or a new species altogether which wiped them out Did the first Americans enter the continent 30 000 or 12 000 years ago Did the Polynesians sail against wind and current to an unknown fate or were they just blown across from South America while out fishing Why do we speak different languages Is it because language traces our biological history or are the two things completely unrelated Evolution because it deals with a past that can never conclusively be known was once ideal material for perpetual debate Enter genetics with a completely new source of objective data Surely these old questions would soon be settled one way or another Or would they Bryan Sykes brings together a world class set of contributors to debate these questions The result is eight lively essays each of which offers a different opinion about what the links between genes language and the archaeological record can tell us about human evolution and indeed whether they can tell us anything conclusive at all This stimulating and challenging book poses more questions than it offers answers eschews jargon and pursues controversy Guaranteed to fascinate anyone who has ever wondered how the fossil record the incredible diversity of human language and our genetic inheritance might combine to give a glimpse of human origins Edited by Bryan Sykes Institute of Molecular Medicine University of Oxford Publisher's note      *The Transforming Principle* Maclyn McCarty, 1986 Forty years ago three medical researchers Oswald Avery Colin MacLeod and Maclyn McCarty made the discovery that DNA is the genetic material With this finding was born
