The subject of regulation is one of the most vital and troublesome in our system of government. In this detailed study of early and mid-twentieth-century regulation of commercial aviation Emmette S. Redford illustrates what happens when government regulates a particular industry. He first sets forth the perspectives for a study of an area of regulation and develops an argument for eclectic perspectives in the study of selected systems, or universes, of social action, such as the performance of an economic function under government regulation. These perspectives are illustrated in the following series of case studies on regulation of commercial aviation: The significance of belief patterns on the content of the Civil Aeronautics Act of 1938. The role of Congress in the regulation of commercial aviation in a two-year period. The interactions of Congress, the president, and the regulated industry in strengthening safety regulation through passage of the Federal Aviation Act of 1958. The actions of the Civil Aeronautics Board on a set of complicated economic issues in the General Passenger Fare Investigation. The position of the Air Transport Association in the regulatory pattern. In "An Essay on Evaluation" Redford summarizes what is revealed in the case studies that is significant with respect to the system of government regulation. He searches for standards for evaluating a system of social control, or for evaluating parts of it, and relates his conclusions to issues regarding the beneficence of a system of regulated private supply of a service. The Regulatory Process is a study of interest to the aviation

industry, to students of regulation of the economy, and to those who seek an understanding of social systems. As every intelligent aviator knows, the skies have no room for mistakes. The third chapter explains how federal regulators exercise authority. Chapter 4 discusses regulatory powers in state and local governments. Chapter 5 explains how a regulation is formulated. Chapter 6 examines four categories of aviation: regulations related to airline business practices, to safety, to the environment, and to miscellaneous factors. Chapter 7 discusses ways in which major segments of the industry are actually regulated. And Chapter 8 forecasts future directions in aviation regulation. "Among its responsibilities for aviation safety, FAA issues certificates for new aircraft and parts, and grants approvals for changes to air operations and aircraft, based on federal aviation regulations. Various studies, GAO's prior work, and industry stakeholders have raised questions about the efficiency of FAA's certification and approval processes, as well as the consistency of its staff in interpreting aviation regulations. Over time, FAA has implemented efforts to address these issues, but they persist as FAA faces greater industry demand and its overall workload has increased. The 2012 FAA Modernization and Reform Act required FAA to work with industry to resolve these issues. In response, FAA chartered two committees--one to address certification and approval processes and another to address regulatory consistency--which recommended improvements in 2012. In 2013, FAA published an implementation plan for addressing the certification and approval process recommendations and promised to publish an implementation plan for addressing the regulatory consistency recommendations at a later date. This testimony provides information on FAA's progress in implementing the (1) certification and approval process recommendations and (2) regulatory consistency recommendations. It also

discusses future challenges industry stakeholders believe FAA will face in implementing these recommendations. This testimony is based on GAO products issued from 2010 to 2014, updated in July 2014 through reviews of recent FAA and industry documents and interviews of FAA officials and industry representatives."--Highlights.
