**Performance Exhaust Systems** Mike Mavrigian,2014-08-15 To extract maximum performance an engine needs an efficient well designed and properly tuned exhaust system In fact the exhaust system s design components and materials have a large impact on the overall performance of the engine Engine builders and car owners need to carefully consider the exhaust layout select the parts and fabricate the exhaust system that delivers the best performance for car and particular application Master engine builder and award winning writer Mike Mavrigian explains exhaust system principles function and components in clear and concise language He then details how to design fabricate and fit exhaust systems to classic street cars as well as for special and

racing applications Air exhaust gas flow dynamics and exhaust system design are explained Cam duration and overlap are also analyzed to determine how an engine breathes in air fuel as the exhaust must efficiently manage this burned mixture Pipe bending is a science as well as art and you re shown how to effectively crush and mandrel bend exhaust pipe to fit your header manifold and chassis combination Header tube diameter and length is taken into account as well as the most efficient catalytic converters and resonators for achieving your performance goals In addition Mavrigian covers the special exhaust system requirements for supercharged and turbocharged systems When building a high performance engine you need a high performance exhaust system that s tuned and fitted to that engine so you can realize maximum performance This comprehensive book is your guide to achieving ultimate exhaust system performance It shows you how to fabricate a system for custom applications and to fit the correct prefabricated system to your car No other book on the market is solely dedicated to fabricating and fitting an exhaust system in high performance applications

**G Protein-Coupled Receptors** Jesus Giraldo,Jean-Philippe Pin,2011-08-16 G protein coupled receptors GPCRs are the largest family of cell surface receptors with more than 800 members identified thus far in the human genome They regulate the function of most cells in the body and represent approximately 3% of the genes in the human genome These receptors respond to a wide variety of structurally diverse ligands ranging from small molecules such as biogenic amines nucleotides and ions to lipids peptides proteins and even light Ligands agonists and antagonists acting on GPCRs are important in the treatment of numerous diseases including cardiovascular and mental disorders retinal degeneration cancer and AIDS It is estimated that these receptors represent about one third of the actual identified targets of clinically used drugs The determination of rhodopsin crystal structure and more recently of opsin 1 and 2 adrenergic and A2A adenosine receptors provides both academia and industry with extremely valuable data for a better understanding of the molecular determinants of receptor function and a more reliable rationale for drug design GPCR structure and function constitutes a hot topic The book which lies between the fields of chemical biology molecular pharmacology and medicinal chemistry is divided into three parts The first part considers what receptor structures

tell us about the mechanism of receptor activation Part II focuses on receptor function It discusses what the data from biophysical and mutational studies and the analysis of the interactions of the receptor with ligands and regulator proteins tell us about the process of signal transduction The final part on modelling and simulation details new insights on the link between structure and mechanism and their implications in drug design
