Multiple View Geometry in Computer Vision Richard Hartley, Andrew Zisserman, 2004-03-25 A basic problem in computer vision is to understand the structure of a real world scene given several images of it Techniques for solving this problem are taken from projective geometry and photogrammetry Here the authors cover the geometric principles and their algebraic representation in terms of camera projection matrices the fundamental matrix and the trifocal tensor The theory and methods of computation of these entities are discussed with real examples as is their use in the reconstruction of scenes from multiple images The new edition features an extended introduction covering the key ideas in the book which itself has been updated with additional examples and appendices and significant new results which have appeared since the first edition Comprehensive background material is provided so readers familiar with linear algebra and basic numerical methods can understand the projective geometry and estimation algorithms presented and implement the algorithms directly from the book *Drugs, Brains, and Behavior*, 2007 The Freedom of the Christian Martin Luther, Adam S. Francisco, 2020-10-15 The Freedom of the Christian was Martin Luther's first public defense of the doctrine of justification by grace through faith on account of Christ alone Luther's explosive rediscovery of the Gospel of Jesus Christ shattered the Church of Rome's foundation of works which considered good works a part of salvation instead of a result of it Here Luther constructed a rich theology that relies on the full power of the Gospel which not only grants saving faith but also nurtures that faith through good works done in the freest service This new abridged translation from Adam Francisco featuring a brief essay from Scott Keith leaves no doubt that the Christian secure in Christ is truly free free from sin death and the devil and free to serve their neighbor
