Moss, Susan M. Brookhart, 2012-07-02 In Learning Targets Connie M Moss and Susan M Brookhart contend that improving student learning and achievement happens in the immediacy of an individual lesson what they call

today's lesson or it doesn't happen at all. The key to making today's lesson meaningful: Learning targets. Written from students' point of view, a learning target describes a lesson-sized chunk of information and skills that students will come to know deeply. Each lesson's learning target connects to the next lesson's target, enabling students to master a coherent series of challenges that ultimately lead to important curricular standards. Drawing from the authors' extensive research and professional learning partnerships with classrooms, schools, and school districts, this practical book situates learning targets in a theory of action that students, teachers, principals, and central office administrators can use to unify their efforts to raise student achievement and create a culture of evidence-based, results-oriented practice. Provides strategies for designing learning targets that promote higher-order thinking and foster student goal setting, self-assessment, and self-regulation. Explains how to design a strong performance of understanding an activity that produces evidence of students' progress toward the learning target. Shows how to use learning targets to guide summative assessment and grading. Learning Targets also includes reproducible planning forms, a classroom walk-through guide, a lesson planning process guide, and guides to teacher and student self-assessment. What students are actually doing during today's lesson is both the source of and the yardstick for school improvement efforts. By applying the insights in this book to your own work, you can improve your teaching expertise and dramatically empower all students as stakeholders in their own learning. *Essential Learning Theories* Andrew P. Johnson, 2019-11-04. Research-based theories provide the basis for good decision making in education. As well, teacher effectiveness and student learning are enhanced when research-based theories are used to design curriculum and daily lessons. This book examines human learning in the context of four types of research-based learning theories: neurological learning theories, behavioral learning theories, cognitive learning theories, and transformative learning theories. With each theory, the basic elements are described along with specific classroom applications. The writing style makes these concepts readily accessible to readers of all levels of experience and expertise. This book is appropriate for preservice teachers who are seeking to comprehend the basic ideas behind these theories. It is appropriate for practicing teachers who want to understand and apply these theories at increasingly higher levels. It is also appropriate for decision makers or anybody else who wants to understand human learning and educational processes. This book ends with a description of lesson planning that is set in the various theoretical contexts and includes a guide for defining an educational philosophy.

Understanding Children's Development Peter K. Smith, Helen Cowie, Mark Blades, 1998-01. Revised to take account of developments in the field, this edition includes new discussion of the major issues in current UK and European research as well as expanded coverage of the practical applications of this research.
