The second line is an instruction to set algebraic mode, to make sure program B is not used accidentally in RPN mode. If the user always works in algebraic mode, or always remembers to switch to the right mode before using a program then this program line is not needed, but it is always safer to use it. A similar line, setting RPN mode, could have been used in program A for the same reason.

Line B003 squares the value in the X register, referred to in the program as REGX. This value will be the value keyed in before the program is run.

This program works just like the RPN version. To use it, first move out of program mode, and to go to the beginning of the program. Then a radius is typed and the program is executed.

Therefore, to calculate the area of a circle with radius 5, press:
