The Medical Terminology Vocabulary Workbook is an awesome tool to use before a course of study as it will help you develop a strong working Insider's Language before you even begin your review. Learn the Secret to Success! After nearly 20 years of teaching Lewis Morris discovered a startling fact: Most students didn't struggle with the subject, they struggled with the language. It was never about brains or ability. His students simply didn't have the knowledge of the specific language needed to succeed. Through experimentation and research, he discovered that for any subject there was a list of essential words, that, when mastered, unlocked a student's ability to progress in the subject. Lewis called this set of vocabulary the "Insider's Words". When he applied these "Insider's Words" the results were incredible. His students began to learn with ease. He was on his way to developing the landmark series of workbooks and applications to teach this "Insider's Language" to students

Word Building--the foundation for success begins with Barbara Gylys and the Body Systems Approach. The med term approaches and how they differ... Most med terms books teach by memorization--the whole word approach. Memorize vocabulary and then try to recognize word patterns. Gylys uses the word-building approach. First learn the patterns of medical words before you learn the vocabulary. Why does word-building work? It begins with the basics... Gylys takes a common sense approach, by introducing word elements first: Roots Combining forms Suffixes Prefixes She covers them one by one, breaking down each word part. Common English word elements are presented... This familiarity makes it easier for

students to learn and break apart and build words. Students can use their understanding of word parts to decipher vocabulary. Mnemonic devices, interactive activities (in the book and on the CD) make word-building fun and this in turn increases retention...no more tedious memorization, students learn by breaking down and rebuilding words! "From my years of teaching, I found it was much easier for students to learn word parts directly associated with a body system (or specialty area), and this has been the key to my approach in all of my texts and software products." --Barbara A.
