With the increasing and earlier sub-specialization of neurology trainees, and their variable exposure to higher academic study, there is little opportunity to put this development into a historical context as a whole. Understanding the 'evidence-base', or appreciating the lack of it in some cases, is an important part of training but this is rarely presented in a palatable, entertaining form. Part of the Landmark Papers in series, this book brings together the ten most important papers for each sub-speciality within neurology, covering the full range of major neurological conditions. Papers have been selected by leading international experts, who not only summarize what each paper showed, but place them into a wider context that makes a coherent story of how their sub-speciality has developed. Critical thinking is the key to solve real world problems. Children must be taught how to think, not what to think. A great teacher will be creating students to do new things through critical thinking, not simply repeating what other generations have done before. We do not need another Albert Einstein or Isaac Newton.... we need a person better than them.
