Synthesis, Design, and Resource Optimization in Batch Chemical Plants Thokozani Majozi, Esmael Reshid Seid, Jui-Yuan Lee, 2015-03-04

The manner in which time is captured forms the foundation for synthesis design and optimization in batch chemical plants. However, there are still serious challenges with handling time in batch plants. Most techniques tend to assume either a fixed time dimension or adopt time average models to tame the time dimension, thereby simplifying the resultant mathematical models. A direct consequence of this simplification is a suboptimal process. *Synthesis Design and Resource Optimization in Batch Chemical Plants* aims to close this scientific gap. Presenting state-of-the-art models for the scheduling, synthesis design, and resource optimization of batch chemical processes, this cutting-edge text describes different ways to represent and capture time in the optimal allocation of tasks to various units with the objective of maximizing throughput or minimizing makespan. Covers synthesis and design where the objective is mainly to yield a chemical facility which satisfies all the targets with minimum capital cost investment. Deals with resource conservation aspects in batch plants where water and energy take the center stage. *Synthesis Design and Resource Optimization in Batch Chemical Plants* offers a comprehensive discussion of scheduling techniques, continuous time formulations, and the synthesis and design of chemical plants that optimally utilize water and energy resources.
