

Choose renewable energy.

Wind, solar, and other renewables make electricity without air pollution.

Choose low VOC products.

Choose paints, adhesives, household cleaners, and other products that have low or no VOCs.

Use less energy.

This will reduce air pollution if your energy comes from gas or coal and save money.

Forgo the fire.

On days when air quality is poor, avoid using your wood fireplace or wood stove if you can.

Compost yard waste.

Avoid burning leaves, branches, and other plant trimmings by composting them.

Walk, bike, or take the bus.

These are low-cost ways to get from place to place and combine errands for efficiency.

Mow in the evening.

This helps prevent ozone formation. Or use an electric or manual mower.

Choose a low-pollution vehicle.

Fuel efficient cars and electric cars help keep air quality good.

Refuel in the evening.

At gas stations, gasoline vapors get into the air, which help make ozone on hot, sunny days.

Air Pollution Control Equipment Louis Theodore, Anthony J. Buonicore, 1988-01-31 Unique problem and solution approach for quickly mastering a broad range of calculations This book's problem and solution approach enables readers to quickly grasp the fundamentals of air pollution control equipment and essential applications Moreover the author sets forth solid principles for the design and selection of air pollution control equipment as well as for its efficient operation and maintenance Readers gain a deep understanding of both the equipment itself and the many factors affecting performance Following two introductory chapters the book dedicates four chapters to examining control equipment for gaseous pollutants including adsorption absorption and incineration equipment The remaining six chapters deal with equipment for managing airborne particulate pollutants including gravity settlers cyclones electrostatic precipitators scrubbers and baghouses The appendix contains discussions of hybrid systems the SI system including conversion constants and a cost equipment model Each chapter offers a short introduction to the control device discussed Next progressively more difficult problems with accompanying solutions enable readers to build their knowledge as they advance through the chapter Problems reflect the most recent developments in pollution control and include a variety of performance equations and operation and maintenance calculations Each problem includes a statement of the problem the data used to solve the problem and a detailed solution Readers may further hone their skills by visiting the text's Web site for additional problems and solutions This publication serves both as a textbook for engineering students and as a reference for engineers and technicians who need to ensure that air pollution control equipment operates efficiently and enables their facility to meet all air pollution control standards and regulations

The Invisible Killer Gary Fuller, 2019-03-19 An urgent examination of one of the biggest global crises facing us today air pollution looking at the drastic worsening of the problem and what we can do about it Fascinating readable and terrifying in equal measure Mark Lynas author of Six Degrees The air pollution that we breathe every day is largely invisible but it is killing us How did it get this bad and how can we stop it Far from a modern day problem scientists were aware of the impact of air pollution as far back as the seventeenth century Now as more of us live in cities we are closer than ever to pollution sources and the detrimental impact on the environment and our health has reached crisis point The Invisible Killer will introduce you to the incredible individuals whose groundbreaking research paved the way to today's understanding of air pollution often at their own detriment Gary Fuller's global story examines devastating incidents from London's Great Smog to Norway's acid rain Los Angeles's traffic problem to wood burning damage in New Zealand Fuller argues that the only way to alter the future course of our planet and improve collective global health is for city and national governments to stop ignoring evidence and take action persuading the public and making polluters bear the full cost of the harm that they do The decisions that we make today will impact on our health for decades to come The Invisible Killer is an essential book for our times and a

cautionary tale we need to take heed of Air Pollution Control C. David Cooper, F. C. Alley, 2002 Writing for engineers working in the area of air pollution control systems Cooper U of Central Florida and Alley emeritus Clemson U present a textbook describing the philosophy and procedures for systems design The primary purpose of the text is to aid in formal design training although general foundational information on air pollution and its control does provide the background for the former Chapters cover process design particulate matter cyclones electrostatic precipitators fabric filters particulate scrubbers auxiliary equipment properties of gases and vapors VOC incinerators gas adsorption and absorption biological controls atmospheric dispersion modeling and indoor air quality and control The CD ROM contains solutions to exercises from the text Annotation copyrighted by Book News Inc Portland OR Health of People, Health of Planet and Our Responsibility Wael Al-Delaimy, Veerabhadran Ramanathan, Marcelo Sánchez Sorondo, 2020-05-13 This open access book not only describes the challenges of climate disruption but also presents solutions The challenges described include air pollution climate change extreme weather and related health impacts that range from heat stress vector borne diseases food and water insecurity and chronic diseases to malnutrition and mental well being The influence of humans on climate change has been established through extensive published evidence and reports However the connections between climate change the health of the planet and the impact on human health have not received the same level of attention Therefore the global focus on the public health impacts of climate change is a relatively recent area of interest This focus is timely since scientists have concluded that changes in climate have led to new weather extremes such as floods storms heat waves droughts and fires in turn leading to more than 600 000 deaths and the displacement of nearly 4 billion people in the last 20 years Previous work on the health impacts of climate change was limited mostly to epidemiologic approaches and outcomes and focused less on multidisciplinary multi faceted collaborations between physical scientists public health researchers and policy makers Further there was little attention paid to faith based and ethical approaches to the problem The solutions and actions we explore in this book engage diverse sectors of civil society faith leadership and political leadership all oriented by ethics advocacy and policy with a special focus on poor and vulnerable populations The book highlights areas we think will resonate broadly with the public faith leaders researchers and students across disciplines including the humanities and policy makers

Air Pollution Control Equipment Calculations Louis Theodore, 2008-11-26 Unique problem and solution approach for quickly mastering a broad range of calculations This book s problem and solution approach enables readers to quickly grasp the fundamentals of air pollution control equipment and essential applications Moreover the author sets forth solid principles for the design and selection of air pollution control equipment as well as for its efficient operation and maintenance Readers gain a deep understanding of both the equipment itself and the many factors affecting performance Following two introductory chapters the book dedicates four chapters to examining control equipment for gaseous pollutants including adsorption absorption and incineration equipment The remaining six chapters deal with equipment for managing airborne

particulate pollutants including gravity settlers cyclones electrostatic precipitators scrubbers and baghouses The appendix contains discussions of hybrid systems the SI system including conversion constants and a cost equipment model Each chapter offers a short introduction to the control device discussed Next progressively more difficult problems with accompanying solutions enable readers to build their knowledge as they advance through the chapter Problems reflect the most recent developments in pollution control and include a variety of performance equations and operation and maintenance calculations Each problem includes a statement of the problem the data used to solve the problem and a detailed solution Readers may further hone their skills by visiting the text s Web site for additional problems and solutions This publication serves both as a textbook for engineering students and as a reference for engineers and technicians who need to ensure that air pollution control equipment operates efficiently and enables their facility to meet all air pollution control standards and regulations
