

Grid Computing is also known as distributed computing

- It is a form of multiprocessing
- In one way we can view all the multi-processor systems as distributed systems as processing load is distributed among the different processors that work together to solve the particular problem.
- Grid computing differs from other forms of computing in the sense as it is very loosely coupled multicomputer.
- They can be connected by local buses or through a network.
- These loosely coupled distributed computers communicate through the network
- This is recently incorporated by microcomputers and NOWs for distributed computing systems.
- Grid computing makes large number of computers from multiple administrative domains to work for a common purpose, to solve one single large task.
