**Biomimetic Polymers** C.G. Gebelein,2012-12-06 The term biomimetic is comparatively new on the chemical scene but the concept has been utilized by chemists for many years Furthermore the basic idea of making a synthetic material that can imitate the functions of natural materials probably could be traced back into antiquity From the dawn of creation people have probably attempted to duplicate or modify the activities of the natural world One can even find allusions to these attempts in the Bible e g Genesis 30 The term mimetic means to imitate or mimic The word mimic means to copy closely or to imitate accurately Biomimetic which has not yet entered most dictionaries means to imitate or mimic some specific bio

logical function Usually the objective of biomimetics is to form some useful material without the need of utilizing living systems In a similar manner the term biomimetic polymers means creating synthetic polymers which imitate the activity of natural bioactive polymers This is a major advance in polymer chemistry because the natural bioactive polymers are the basis of life itself Thus biomimetic polymers imitate the life process in many ways This present volume delineates some of the recent progress being made in this vast field of biomimetic polymers Chemists have been making biomimetic polymers for more than fifty years although this term wasn't used in the early investigations
