Illuminating Social Life Peter Kivisto, 2011 *Illuminating Social Life* has enjoyed increasing popularity with each edition. It is the only book designed for undergraduate teaching that shows today's students how classical and contemporary social theories can be used to shed new light on such topics as the internet, the world of work, fast food restaurants, shopping malls, alcohol use, body building, sales and service, and new religious movements. A perfect complement for the sociological theory course, it offers 13 original essays by leading scholars in the field who are also experienced undergraduate theory teachers. Substantial introductions by the editor link the applied essays to a complete review of the classical and modern social theories used in the book.

Manager Selection Scott Stewart, 2015 *Manager selection* is a critical step in implementing any investment program. Investors hire portfolio managers to act as their agents, and portfolio managers are then expected to perform to the best of their abilities and in the investors' best interests. Investors must practice due diligence when selecting portfolio managers. They need to not only identify skillful managers but also determine the appropriate weights to assign to those managers. This book is designed to help investors improve their ability to select managers. Achieving this goal includes reviewing techniques for hiring active indexed and alternative managers, highlighting strategies for setting portfolio manager weights, and monitoring current managers and considering the value of quantitative and qualitative methods for successful manager selection.

An Introduction to Abstract Mathematics Robert J. Bond, William J. Keane, 2007-08-24 Bond and Keane explicate the elements of logical mathematical argument to elucidate the meaning and

importance of mathematical rigor With definitions of concepts at their disposal students learn the rules of logical inference read and understand proofs of theorems and write their own proofs all while becoming familiar with the grammar of mathematics and its style In addition they will develop an appreciation of the different methods of proof contradiction induction the value of a proof and the beauty of an elegant argument The authors emphasize that mathematics is an ongoing vibrant discipline its long fascinating history continually intersects with territory still uncharted and questions still in need of answers The authors extensive background in teaching mathematics shines through in this balanced explicit and engaging text designed as a primer for higher level mathematics courses They elegantly demonstrate process and application and recognize the byproducts of both the achievements and the missteps of past thinkers Chapters 1-5 introduce the fundamentals of abstract mathematics and chapters 6-8 apply the ideas and techniques placing the earlier material in a real context Readers interest is continually piqued by the use of clear explanations practical examples discussion and discovery exercises and historical comments

Community-Based Participatory Research Karen Hacker, 2013-02-20 Community Based Participatory Research by Dr Karen Hacker presents a practical approach to CBPR by describing how an individual researcher might understand and then actually conduct CBPR research This how to book provides a concise overview of CBPR theoretical underpinnings methods considerations and ethical issues in an accessible format interspersed with real life case examples that can accompany other methodologic texts in multiple disciplines

Elements of Causal Inference Jonas Peters, Dominik Janzing, Bernhard Schölkopf, 2017-11-29 A concise and self contained introduction to causal inference increasingly important in data science and machine learning The mathematization of causality is a relatively recent development and has become increasingly important in data science and machine learning This book offers a self contained and concise introduction to causal models and how to learn them from data After explaining the need for causal models and discussing some of the principles underlying causal inference the book teaches readers how to use causal models how to compute intervention distributions how to infer causal models from observational and interventional data and how causal ideas could be exploited for classical machine learning problems All of these topics are discussed first in terms of two variables and then in the more general multivariate case The bivariate case turns out to be a particularly hard problem for causal learning because there are no conditional independences as used by classical methods for solving multivariate cases The authors consider analyzing statistical asymmetries between cause and effect to be highly instructive and they report on their decade of intensive research into this problem The book is accessible to readers with a background in machine learning or statistics and can be used in graduate courses or as a reference for researchers The text includes code snippets that can be copied and pasted exercises and an appendix with a summary of the most important technical concepts

Spatially Independent Martingales, Intersections, and Applications Pablo Shmerkin, Ville Suomala, 2018-02-22 The authors define a class of random measures spatially independent martingales which we view as a natural generalization of the canonical

random discrete set and which includes as special cases many variants of fractal percolation and Poissonian cut outs The authors pair the random measures with deterministic families of parametrized measures and show that under some natural checkable conditions a s the mass of the intersections is H lder continuous as a function of This continuity phenomenon turns out to underpin a large amount of geometric information about these measures allowing us to unify and substantially generalize a large number of existing results on the geometry of random Cantor sets and measures as well as obtaining many new ones Among other things for large classes of random fractals they establish a very strong versions of the Marstrand Mattila projection and slicing results as well as dimension conservation b slicing results with respect to algebraic curves and self similar sets c smoothness of convolutions of measures including self convolutions and nonempty interior for sumsets and d rapid Fourier decay Among other applications the authors obtain an answer to a question of I aba in connection to the restriction problem for fractal measures

Proofs from THE BOOK Martin Aigner,Günter M. Ziegler,2013-06-29 According to the great mathematician Paul Erd s God maintains perfect mathematical proofs in The Book This book presents the authors candidates for such perfect proofs those which contain brilliant ideas clever connections and wonderful observations bringing new insight and surprising perspectives to problems from number theory geometry analysis combinatorics and graph theory As a result this book will be fun reading for anyone with an interest in mathematics

An Invitation to Statistics in Wasserstein Space Victor M. Panaretos,Yoav Zemel,2020-03-10 This open access book presents the key aspects of statistics in Wasserstein spaces i e statistics in the space of probability measures when endowed with the geometry of optimal transportation Further to reviewing state of the art aspects it also provides an accessible introduction to the fundamentals of this current topic as well as an overview that will serve as an invitation and catalyst for further research Statistics in Wasserstein spaces represents an emerging topic in mathematical statistics situated at the interface between functional data analysis where the data are functions thus lying in infinite dimensional Hilbert space and non Euclidean statistics where the data satisfy nonlinear constraints thus lying on non Euclidean manifolds The Wasserstein space provides the natural mathematical formalism to describe data collections that are best modeled as random measures on Euclidean space e g images and point processes Such random measures carry the infinite dimensional traits of functional data but are intrinsically nonlinear due to positivity and integrability restrictions Indeed their dominating statistical variation arises through random deformations of an underlying template a theme that is pursued in depth in this monograph

Deep Space Telecommunications Systems Engineering Joseph H. Yuen,2013-04-17 The challenge of communication in planetary exploration has been unusual The guidance and control of spacecraft depend on reliable communication Scientific data returned to earth are irreplaceable or replaceable only at the cost of another mission In deep space communications propagation is good relative to terrestrial communications and there is an opportunity to press toward the mathematical limit of microwave communication Yet the limits must be approached warily with reliability as well as channel capacity in mind

Further the effects of small changes in the earth's atmosphere and the interplanetary plasma have small but important effects on propagation time and hence on the measurement of distance. Advances are almost incredible. Communication capability measured in 18 bits per second at a given range rose by a factor of 10 in the 19 years from Explorer I of 1958 to Voyager of 1977. This improvement was attained through ingenious design based on the sort of penetrating analysis set forth in this book by engineers who took part in a highly detailed and amazingly successful program. Careful observation and analysis have told us much about limitations on the accurate measurement of distance. It is not easy to get busy people to tell others clearly and in detail how they have solved important problems. Joseph H. Yuen and the other contributors to this book are to be commended for the time and care they have devoted to explicating one vital aspect of a great adventure of mankind.

The Finite Volume Method in Computational Fluid Dynamics F. Moukalled, L. Mangani, M. Darwish, 2015-08-13. This textbook explores both the theoretical foundation of the Finite Volume Method (FVM) and its applications in Computational Fluid Dynamics (CFD). Readers will discover a thorough explanation of the FVM numerics and algorithms used for the simulation of incompressible and compressible fluid flows along with a detailed examination of the components needed for the development of a collocated unstructured pressure-based CFD solver. Two particular CFD codes are explored. The first is uFVM, a three-dimensional unstructured pressure-based finite volume academic CFD code implemented within Matlab. The second is OpenFOAM, an open-source framework used in the development of a range of CFD programs for the simulation of industrial-scale flow problems. With over 220 figures, numerous examples, and more than one hundred exercises on FVM numerics, programming, and applications, this textbook is suitable for use in an introductory course on the FVM in an advanced course on numerics and as a reference for CFD programmers and researchers. Connecting Abstract Algebra to Secondary Mathematics, for Secondary Mathematics Teachers Nicholas H. Wasserman,2018-12-12 Secondary mathematics teachers are frequently required to take a large number of mathematics courses including advanced mathematics courses such as abstract algebra as part of their initial teacher preparation program and or their continuing professional development The content areas of advanced and secondary mathematics are closely connected Yet despite this connection many secondary teachers insist that such advanced mathematics is unrelated to their future professional work in the classroom This edited volume elaborates on some of the connections between abstract algebra and secondary mathematics including why and in what ways they may be important for secondary teachers Notably the volume disseminates research findings about how secondary teachers engage with and make sense of abstract algebra ideas both in general and in relation to their own teaching as well as offers itself as a place to share practical ideas and resources for secondary mathematics teacher preparation and professional development Contributors to the book are scholars who have both experience in the mathematical preparation of secondary teachers especially in relation to abstract algebra as well as those who have engaged in related educational research The volume addresses some of the persistent issues in secondary mathematics teacher education in connection to advanced mathematics courses as well as situates and

conceptualizes different ways in which abstract algebra might be influential for teachers of algebra Connecting Abstract Algebra to Secondary Mathematics for Secondary Mathematics Teachers is a productive resource for mathematics teacher educators who teach capstone courses or content focused methods courses as well as for abstract algebra instructors interested in making connections to secondary mathematics [Birth of an Empire](#) Yuri Pines, Gideon Shelach, Gideon Shelach-Lavi, Lothar von Falkenhausen, Robin D.S.
